Dear customer,

For the correct operation of the chambers, it is important that you read this operating manual completely and carefully and observe all instructions as indicated. Failure to read, understand and follow the instructions may result in personal injury. It can also lead to damage to the unit and/or poor equipment performance.

1. Safety

This operating manual is part of the components of delivery. Always keep it handy for reference. The device should only be operated by laboratory personnel especially trained for this purpose and familiar with all precautionary measures required for working in a laboratory. Observe the national regulations on minimum age of laboratory personnel. To avoid injuries and damage observe the safety instructions of the operating manual.

![WARNING]

Failure to observe the safety instructions.
Serious injuries and chamber damage.
- Observe the safety instructions in this operating manual.
- Carefully read the complete operating instructions of the chamber.

1.1 Legal considerations

This operating manual is for informational purposes only. It contains information for installing, start-up, operation and maintenance of the product. Note: the contents and the product described are subject to change without notice.

Understanding and observing the instructions in this operating manual are prerequisites for hazard-free use and safety during operation and maintenance. In no event shall BINDER be held liable for any damages, direct or incidental arising out of or related to the use of this manual.

This operating manual cannot cover all conceivable applications. If you would like additional information, or if special problems arise that are not sufficiently addressed in this manual, please ask your dealer or contact us directly by phone at the number located on page one of this manual

Furthermore, we emphasize that the contents of this operating manual are not part of an earlier or existing agreement, description, or legal relationship, nor do they modify such a relationship. All obligations on the part of BINDER derive from the respective purchase contract, which also contains the entire and exclusively valid statement of warranty administration. The statements in this manual neither augment nor restrict the contractual warranty provisions.

1.2 Structure of the safety instructions

In this operating manual, the following safety definitions and symbols indicate dangerous situations following the harmonization of ISO 3864-2 and ANSI Z535.6.

1.2.1 Signal word panel

Depending on the probability of serious consequences, potential dangers are identified with a signal word, the corresponding safety color, and if appropriate, the safety alert symbol.

![DANGER]

Indicates an imminently hazardous situation that, if not avoided, will result in death or serious (irreversible) injury.
### 1.2.2 Safety alert symbol

Use of the safety alert symbol indicates a **risk of injury**.

Observe all measures that are marked with the safety alert symbol in order to avoid death or injury.

### 1.2.3 Pictograms

#### Warning signs

1.5 General safety instructions on installing and operating the chambers

With regard to operating the chambers and to the installation location, please observe the DGUV guidelines 213-850 on safe working in laboratories (formerly BGI/GUV-I 850-0, BGR/GUV-R 120 or ZH 1/119, issued by the employers' liability insurance association) (for Germany).

BINDER GmbH is only responsible for the safety features of the chamber provided skilled electricians or qualified personnel authorized by BINDER perform all maintenance and repair, and if components relating to chamber safety are replaced in the event of failure with original spare parts.

To operate the chamber, use only original BINDER accessories or accessories from third-party suppliers authorized by BINDER. The user is responsible for any risk caused by using unauthorized accessories.

---

### CAUTION

**Danger of overheating.**

**Damage to the chamber.**

- Do NOT install the chamber in unventilated recesses.
- Ensure sufficient ventilation for dispersal of the heat.

Do not operate the chambers in hazardous locations.

---

### DANGER

**Explosion hazard.**

**Danger of death.**

- Do NOT operate the chamber in potentially explosive areas.
- KEEP explosive dust or air-solvent mixtures AWAY from the chamber.

The chambers do not dispose of any measures of explosion protection.

---

**Explosion hazard.**

**Danger of death.**

- Do NOT introduce any substance into the chamber which is combustible or explosive at working temperature.
- NO explosive dust or air-solvent mixture in the inner chamber.
Any solvent contained in the charging material must not be explosive or flammable. I.e., irrespective of the solvent concentration in the steam room, NO explosive mixture with air must form. The temperature inside the chamber must lie below the flash point or below the sublimation point of the charging material. Familiarize yourself with the physical and chemical properties of the charging material, as well as the contained moisture constituent and its behavior with the addition of heat energy.

Familiarize yourself with any potential health risks caused by the charging material, the contained moisture constituent or by reaction products that may arise during the temperature process. Take adequate measures to exclude such risks prior to putting the chamber into operation.

**DANGER**

Electrical hazard.
Danger of death.
∅ The chamber must NOT become wet during operation or maintenance.

The chambers were produced in accordance with the VDE regulations and were routinely tested in accordance to VDE 0411-1 (IEC 61010-1).

During and shortly after operation, the temperature of the inner surfaces almost equals the set-point.

**CAUTION**

The inner chamber, the exhaust duct, the door window (option), the door gaskets, and the access ports will become hot during operation.
Danger of burning.
∅ Do NOT touch the inner surfaces, the exhaust duct, the door window, the access ports, the door gaskets, or the charging material during operation.

1.6 **Intended use**

The chambers are suitable for exact tempering of harmless materials and for drying and heat treatment of solid or pulverized charging material, as well as bulk material, using the supply of heat. They can be used to dry e.g. glassware, and for warm storage of liquids in containers.

A solvent content must not be explosive or flammable. A mixture of any component of the charging material with air must NOT be explosive. The operating temperature must lie below the flash point or below the sublimation point of the charging material. Any component of the charging material must NOT be able to release toxic gases

Other applications are not approved.

The chambers are not classified as medical devices as defined by the Medical Device Directive 93/42/EEC.

Do NOT use the chamber for drying processes when large quantities of vapor would form and result in condensation.

Due to the special demands of the Medical Device Directive 93/42/EEC, these chambers are not qualified for sterilization of medical devices as defined by the directive.

Observing the instructions in this operating manual and conducting regular maintenance work (chap. 9) is part of the intended use.

WARNING: If customer should use a BINDER chamber running in non-supervised continuous operation, we strongly recommend in case of inclusion of irrecoverable specimen or samples to split such specimen or samples and store them in at least two chambers, if this is feasible.
The charging material shall not contain any corrosive ingredients that may damage the machine components. Such ingredients include in particular acids and halides. Any corrosive damage caused by such ingredients is excluded from liability by BINDER GmbH.

The chambers do not dispose of any measures of explosion protection.

**DANGER**

Explosion or implosion hazard.
Danger of poisoning.
Danger of death.

☑️ Do NOT introduce any substance combustible or explosive at working temperature into the chamber, in particular no energy sources such as batteries or lithium-ion batteries.

☑️ NO explosive dust or air-solvent mixture in the inner chamber.

☑️ Do NOT introduce any substance which could lead to release of toxic gases.

In case of foreseeable use of the device there is no risk for the user through the integration of the chamber into systems or by special environmental or operating conditions in the sense of EN 61010-1:2010. For this, the intended use of the chamber and all its connections must be observed.

1.7 Operating instructions

Depending on the application and location of the chamber, the operator of the chamber must provide the relevant information for safe operation of the chamber in a set of operating instructions.

Keep these operating instructions with the chamber at all times in a place where they are clearly visible. They must be comprehensible and written in the language of the employees.

1.8 Measures to prevent accidents

The manufacturer took the following measures to prevent ignition and explosions:

- **Indications on the type plate**
  See operating manual chap. 1.4.

- **Operating manual**
  An operating manual is available for each chamber.

- **Overtemperature monitoring**
  The chamber is equipped with a temperature display, which can be read from outside.
  The chamber is equipped with an additional safety controller (temperature safety device class 2 acc. to DIN 12880:2007). Visual and audible (buzzer) signals indicate temperature exceeding.

- **Safety, measurement, and control equipment**
  The safety, measuring, and control equipment is easily accessible.

- **Electrostatic charge**
  The interior parts are grounded.
• **Non-ionizing radiation**
  Non-ionizing radiation is not intentionally produced, but released only for technical reasons by electrical equipment (e.g. electric motors, power cables, solenoids). The machine has no permanent magnets. If persons with active implants (e.g. pacemakers, defibrillators) keep a safe distance (distance of field source to implant) of 30 cm, an influence of these implants can be excluded with high probability.

• **Protection against touchable surfaces**
  Tested according to EN ISO 13732-1:2008.

• **Floors**
  See operating manual chap. 3.4 for correct installation

• **Cleaning**
  See operating manual chap. 9.2.

• **Examinations**
  The chamber has been inspected by the “Deutsche Gesetzliche Unfallversicherung e.V. (DGUV) (German Social Accident Insurance (DGUV))” (German Social Accident Insurance (DGUV), Testing and Certification Body for Foodstuffs and Packaging Industry in DGUV Test) and bears the GS mark. (Not valid for UL chambers)

2. **Chamber description**

BINDER drying and heating ovens FED are equipped with an electronic PID-controller with digital display. The temperature is indicated with an accuracy of one degree.

The chambers are heated electrically and are ventilated by fan-assisted, forced-air circulation. They FED are equipped with a temperature safety device according to DIN12880 (chap. 7).

The APT.line™ preheating chamber system guarantees high level of spatial and time-based temperature precision, thanks to the direct and distributed air circulation into the interior. The fan supports exact attainment and maintenance of the desired temperature accuracy.

The chambers are regularly equipped with a temperature safety device according to DIN12880:2007 (chap. 7).

The inner chamber, the pre-heating chamber and the inside of the doors are all made of stainless steel V2A (German material no. 1.4301, US equivalent AISI 304). When operating the chamber at temperatures above 150 °C, the impact of the oxygen in the air may cause discoloration of the metallic surfaces (yellowish-brown or blue) by natural oxidation processes. These colorations are harmless and will in no way impair the function or quality of the chamber. The housing is RAL 7035 powder-coated. All corners and edges are also completely coated.

All chamber functions are easy and comfortable to use thanks to their clear arrangement. Major features are easy cleaning of all chamber parts and avoidance of undesired contamination.

The chambers are equipped with a serial interface RS 422 for computer communication, e.g. via the APT-COM™ 4 Multi Management Software (option, chap. 8.1). For further options, see chap. 12.5.

The model FED 720 is equipped with four castors. Both front castors can be locked by brakes.

The chamber can be operated in a temperature range of 5 °C / 41 °F above room temperature up to 300 °C / 572 °F.

3. Completeness of delivery, transportation, storage, and installation

3.1 Unpacking, and checking the equipment and completeness of delivery

After unpacking, please check the chamber and its optional accessories, if any, based on the delivery receipt for completeness and for transportation damage. Inform the carrier immediately if transportation damage has occurred.

The final tests of the manufacturer may have caused traces of the racks on the inner surfaces. This has no impact on the function and performance of the chamber.

Please remove any transportation protection devices and adhesives in/on the chamber and on the doors and take out the operating manuals and accessory equipment.

CAUTION

Sliding or tilting the chamber.
Damage to the chamber.
Risk of injury by lifting heavy loads.
☑ Do NOT lift or transport the chamber using the door handle or the door.
☑ Do NOT lift chambers by hand
➢ Lift chambers from the pallet using technical devices (fork lifter). Set the fork lifter only from the rear in the middle of the chamber. Make sure to place all the lateral supports of the chamber on the forks.
If you need to return the chamber, please use the original packing and observe the guidelines for safe lifting and transportation (chap. 3.2).

For disposal of the transport packing, see chap. 10.1.

**Note on second-hand chambers (Ex-Demo chambers):**

Second-hand chambers have been used for a short time for tests or exhibitions. They are thoroughly tested before resale. BINDER ensures that the chamber is technically sound and will work flawlessly.

Second-hand chambers are marked with a sticker on the chamber door. Please remove the sticker before commissioning the chamber.

### 3.2 Guidelines for safe lifting and transportation

The front castors of chambers size 720 can be blocked by brakes. Please move the chambers with castors only when empty and on an even surface, otherwise the castors may be damaged. After operation please observe the guidelines for temporarily decommissioning the chamber (chap. 10.2).

![CAUTION]

- Sliding or tilting the chamber.
  - Damage to the chamber.
  - Risk of injury by lifting heavy loads.
  - Transport the chamber only in its original packaging.
  - Secure the chamber with transport straps for transport.
  - Do **NOT** lift or transport the chamber using the door handle or the door.
  - Do **NOT** lift chambers by hand.
  - Place chambers using technical devices (fork lifter) on the transport pallet. Set the fork lifter only from the rear in the middle of the chamber. Make sure to place all the lateral supports of the chamber on the forks.
  - Transport chambers **ONLY** with the original transport pallet. Set the fork lifter only to the pallet. Without the pallet the chamber is in imminent danger of overturning!!

- Permissible ambient temperature range during transport: -10 °C to +60 °C.

You can order transport packing and pallets for transportation purposes from BINDER Service.

### 3.3 Storage

Intermediate storage of the chamber is possible in a closed and dry room. Observe the guidelines for temporary decommissioning (chap. 10.2).

- Permissible ambient temperature range during storage: -10 °C to +60 °C.
- Permissible ambient humidity: max. 70 % r.H., non-condensing

When after storage in a cold location you transfer the chamber to its warmer installation site, condensation may form. Before start-up, wait at least one hour until the chamber has attained ambient temperature and is completely dry.
3.4 Location of installation and ambient conditions

Set up the chamber on an even and non-flammable surface, free from vibration and in a well-ventilated, dry location and align it using a spirit level. The site of installation must be capable of supporting the chamber’s weight (see technical data, chap. 12.4). The chambers are designed for setting up inside a building (indoor use).

**CAUTION**

Danger of overheating.
Damage to the chamber.

- Do NOT set up the chamber in non-ventilated recesses.
- Ensure sufficient ventilation for dispersal of the heat.

- Permissible ambient temperature range during operation: +18 °C up to +40 °C. At elevated ambient temperature values, fluctuations in temperature can occur.

- The ambient temperature should not be substantially higher than the indicated ambient temperature of +25 °C to which the specified technical data relate. For other ambient conditions, deviations from the indicated data are possible.

- Permissible ambient humidity: 70 % r.H. max., non-condensing.

- Installation height: max. 3000 m / 9842 ft. above sea level.

When placing several chambers of the same size side by side, maintain a minimum distance of 250 mm between each chamber. Wall distances: rear 100 mm, sides 160 mm. Spacing above the chamber of at least 100 mm must also be accounted for.

To completely separate the chamber from the power supply, you must disconnect the power plug. Install the chamber in a way that the power plug is easily accessible and can be easily pulled in case of danger.

For the user there is no risk of temporary overvoltages in the sense of EN 61010-1:2010.

Do not install or operate the chamber in potentially explosive areas.

**DANGER**

Explosion hazard.
Danger of death.

- Do NOT operate the chamber in potentially explosive areas.
- KEEP explosive dust or air-solvent mixtures AWAY from the vicinity of the chamber.
4. Installation

4.1 Electrical connection

The chambers are supplied ready for connection. They come with a fixed power connection cable of at least 1800 mm / 70.87 in in length.

- The domestic socket must also provide a protective conductor. Make sure that the connection of the protective conductor of the domestic installations to the chamber’s protective conductor meets the latest technology. The protective conductors of the socket and plug must be compatible!
- Prior to connection and start-up, check the power supply voltage. Compare the values to the specified data located on the chamber’s type plate (chamber front behind the door, bottom left-hand, chap. 1.4).
- When connecting, please observe the regulations specified by the local electricity supply company and as well as the VDE directives (for Germany). We recommend the use of a residual current circuit breaker.
- Pollution degree (acc. to IEC 61010-1): 2
- Over-voltage category (acc. to IEC 61010-1): II

**CAUTION**

Danger of incorrect power supply voltage.
Damage to the equipment.
- Check the power supply voltage before connection and start-up.
- Compare the power supply voltage with the data indicated on the type plate.

See also electrical data (chap.12.4).

To completely separate the chamber from the power supply, you must disconnect the power plug. Install the chamber in a way that the power plug is easily accessible and can be easily pulled in case of danger.

4.2 Connection to a suction plant (optional)

When directly connecting a suction plant the spatial temperature exactitude, the heating-up and the recovering times and the maximum temperature will be negatively influenced. So no suction plant should be directly connected to the exhaust duct.

Active suction from the chamber must only be performed together with extraneous air. Perforate the connecting piece to the suction device or place an exhaust funnel at some distance to the exhaust duct.
5. Start up

5.1 Turning on the chamber

Warming chambers may release odors in the first few days after commissioning. This is not a quality defect. To reduce odors quickly we recommend heating up the chamber to its nominal temperature for one day and in a well-ventilated location.

1. Insert the power plug into a suitable socket (chap. 4.1).
2. Turn on chambers at the main power switch (10)
   The green “Standby” LED illuminates.

3. Press until the display lights up.
   The controller is now in normal display (actual value display).

   If the chamber is operating (time functions “Continuous operation”, or “Timer operation” with the set time just running down chap. 6.3), the **actual temperature value** (example: 22 °C) is displayed

   If the chamber is in time function “Timer operation” with no time programmed or the set time run-off (chap. 6.3), the chamber is inactive (no heating). The display alternately shows the **actual temperature value** (example: 22 °C) and “tOff”:

   Adjust the temperature safety device following any changes of the set-point (chap. 7).

5.2 Heating operation display

The heating is active as soon as the red heating control light in the bottom right corner of the display slowly begins to flash depending on the heat requirement (example: 70 °C):
5.3 Air change

Opening the air flap in the exhaust duct serves to adjust the air change.

Without connecting a suction plant:
- If the air flap is open and the fan is operating, fresh air comes in via aeration gaps.
- If the air flap is completely open, the spatial temperature accuracy can be negatively influenced.

Figure 4: Adjusting the air flap

6. Controller setting

6.1 Display / entry of temperature and ventilation set-points (without ramp function)

The chamber is operating, the controller is in normal display (actual value display). The actual temperature value (example: 22 °C) is displayed:

1. Press button
   The display shows alternately "SP" and the previous temperature set-point (example: 60 °C):

   ![Temperature Display]

2. With the buttons enter a set-point value between 0 and 300.

   The desired temperature set-point can be selected in a temperature range from 5 °C above room temperature up to 300 °C.

   Wait 2 seconds until the entered temperature value is taken over (display flashing once).

3. Press button to proceed to the fan speed entry.
   The display shows alternately "n" and the previous fan speed set-point (example: 100%):

   ![Fan Speed Display]

4. Set the desired fan speed with the buttons.

   The fan speed can be set to a value between 0% and 100%.

   Wait 2 seconds until the entered value is taken over (display flashing once).
5. Press button to return to normal display (actual value display) (automatically after approx. 30 seconds).

Adjust the temperature safety device following any changes of the set-point (chap. 7).

6.2 Display / entry of temperature and ventilation set-points (with selected temperature ramp)

If previously a temperature ramp value has been selected (chap. 6.4.2):

Press button in normal display / actual value display during ramp operation to have displayed the actual temperature ramp set-point changing according to the selected gradient in addition to the entered final set-points for temperature and fan speed.

The chamber is operating, the controller is in normal display (actual value display). The actual temperature value (example: 22 °C) is displayed:

1. Press button

The display shows alternately “SPr” and the actual temperature ramp set-point changing according to the selected gradient (example: 42 °C):

This ramp set-point is only displayed, not adjustable.

2. Press button

The display shows alternately “SP” and the previous temperature set-point (example: 60 °C):

3. With the buttons enter a set-point value between 0 and 300.

The desired temperature set-point can be selected in a temperature range from 5 °C above room temperature up to 300 °C.

Wait 2 seconds until the entered temperature value is taken over (display flashing once).

4. Press button to proceed to the fan speed entry.

The display shows alternately “n” and the previous fan speed set-point (example: 100%):
5. Set the desired fan speed with the \( \downarrow \uparrow \) buttons

The fan speed can be set to a value between 0% and 100%.

Wait 2 seconds until the entered value is taken over (display flashing once).

6. Press \( \mathbf{X} \mathbf{W} \) button to return to normal display / actual value display (automatically after approx. 30 seconds).

Adjust the temperature safety device following any changes of the set-point (chap. 7).

6.3 Time functions: Continuous operation and Timer operation

Press the time management button \( \mathbf{C} \). The timer indicates its current time function. There are two possible time functions:

**Continuous operation**

The display shows alternately "t1" (time function) and the time function “Continuous operation” “t inf”:

The heating is permanently active, independent of the timer setting.

**Timer operation**

The display shows alternately "t1" (time function) and the running-down time or “tOff”:

- **Remaining time** (example: 28 Min.) – **Timer running down**
  Heating activity depending on the entered time value and the timer function selected in the user menu (chap.6.4.4)

- **Timer not programmed or run-down “t off”**
  If the timer has run-down, the chamber’s behavior depends on the pre-selected timer function (chap. 6.4.4).

Press \( \mathbf{X} \mathbf{W} \) button to return to normal display (actual value display) (automatically after approx. 30 seconds).
6.3.1 Switching between Continuous operation and Timer operation

Press the time management button ✋.

The controller displays the actual time function. In time function “Continuous operation”, “t1” and “t inf” are displayed alternately. In time function “Timer operation”, “t1” is displayed alternately with the running-down time or “tOff”.

If in time function “Timer operation” the Timer is just running off (“t1”displayed alternately with the running-down time) the timer must at first be set to Zero (chap. 6.3.3). Now “t1” is displayed alternately with “tOff”, and the controller can be changed to time function “Continuous operation”.

Press ✋ button to return to normal display / actual value display (automatically after approx. 30 sec).

6.3.2 Continuous operation

1. Press the time management button ✋. The timer indicates its current time function.

2. If necessary, switch to Continuous operation by button ✋.

   The display shows alternately “t1” and the time function “Continuous operation” “t inf”:

3. Press ✋ button to return to normal display (actual value display) (automatically after approx. 30 seconds).

   The actual temperature value (example: 22 °C) is displayed:

Now the controller operates with the entered set-points (chap. 6.1) in continuous operation. The heating is permanently active, independent of the timer setting.

To cancel Continuous operation, proceed accordingly:

1. Press the time management button ✋.

2. Switch to Timer operation by pressing down button ✋ for 2 seconds (chap. 6.3.1).
6.3.3 Setting the timer values

1. Press the time management button 🔒. The controller indicates its current time function.

2. If necessary, switch to timer operation by button 🔶. The display alternately shows "t1" and the running-down time or "tOff":

![Display showing "t1" and running-down time](image1)

or

![Display showing "t1" and running-down time](image2)

Remaining time (example: 28 minutes) – Timer running down

Timer not programmed or run-off "t off"

3. Set the desired time [hh.mm] with the arrow buttons ▼ ▲. The set value is automatically adopted after 2 seconds.

The display alternately shows "t1" and the set time now running down.

![Display showing "t1" and running-down time](image3)

The time directly begins to run off after taking-over of the entered value. The use of this time depends on the timer function selected in the user menu (chap. 6.4.4).

4. Press button ❌ to return to normal display (actual value display) (automatically after approx. 30 seconds).

The actual temperature value is displayed (example: 22 °C):

![Actual temperature display](image4)

The controller operates with the entered set-points (chap. 6.1) until run-down of the set time. Heating activity depending on the entered time value and the timer function selected in the user menu (chap.6.4.4)

To know the remaining timer time or, if appropriate, to modify it, press the time management button in normal display (actual value display).

The display alternately shows "t1" and running-down time:

![Display showing "t1" and running-down time](image5)

After the set time has run down the display alternately shows the actual temperature value (example: 22 °C) and "tOff":

![Actual temperature and timer off display](image6)

Now the heating is inactive. The fan continues operating.
6.4 User level settings

By pressing down button \( \text{X} \) in normal display (actual value display) for 5 sec, you enter the user menu. Settings in this menu affect controller operation.

**User level overview:**

Press down button \( \text{X} \) for approx. 5 seconds

Select the **temperature unit** (chap. 6.4.1)

Press \( \text{X} \) button

**Ramp function** (chap. 6.4.2)

Press \( \text{X} \) button

Setting the **chamber address** (chap. 6.4.3)

Press \( \text{X} \) button

**Timer function** (chap. 6.4.4)

Press \( \text{X} \) button

Setting the **interface mode** and, if appropriate, the **printer interval** (chap. 6.4.5)

Press button \( \text{X} \) to return to normal display with display of the temperature set-point. Or:

After approx. 30 seconds the controller automatically returns to normal display / actual value display.

All settings can be carried out independently (as described in the individual sections) or one after the other during one single process.

⚠️ The defined parameters are not deleted when the main power switch is turned off or in case of power failure.
6.4.1 Temperature unit change between degrees Celsius °C and degrees Fahrenheit °F

If required, the temperature display can be changed as follows:

1. Press down button for approx. 5 seconds.
   
   The display alternately shows "unit" and the actual setting of the temperature unit:

   ![Temperature Display]

2. Use the buttons to set the required unit.

3. The set unit is automatically adopted after 2 seconds.

<table>
<thead>
<tr>
<th>C = degrees Celsius</th>
<th>0 °C = 31°F</th>
<th>Conversion:</th>
</tr>
</thead>
<tbody>
<tr>
<td>F= degrees Fahrenheit</td>
<td>100 °C = 212°F</td>
<td>[Value in °F] = [Value in °C] * 1.8 + 32</td>
</tr>
</tbody>
</table>

When specifying the set point ramp (see chap. 6.4.2) this setting is accordingly taken as the basis.

If the unit is changed, the temperature set-point and limits are converted accordingly.

6.4.2 Enter a temperature ramp

Temperature ramps can be programmed in order to extend heating up times. This may be necessary in some cases, in order to prevent temperature stresses in the material during the heating up phase. Temperature ramps should only be used if required. The use of temperature ramps may result in the heating up times being considerably slowed down.

The entry in °C/min or in °F/min meaning the nominal value gradient and limits the maximum temperature increase to this value. Due to the heat and evaporation energy assumed by the drying material, smaller temperature gradients may also result.

A temperature ramp proceeds from the previously entered to a new set-point. The temperature must have adjusted to the start set-point. Enter settings in 3 steps:

1. Enter set-point of ramp start temperature. Let temperature adjust to this set-point temperature.

2. Set the ramp to the desired gradient in °C/min or in °F/min.
   
   You can enter a gradient value from 0 up to 10.
   
   Setting the gradient to 0 means ramp function off = maximum heating power.
   
   Setting the gradient to another value, e.g., 3, means the chamber will try to heat up with a speed of 3 °C/min.
   
   A heat-up rate of 4 °C/minute can be regarded as a realistic maximum.

3. Enter set-point (final ramp temperature).

The ramp should only be set if required. The setting "0" means ramp function switched off. The chamber is being heated at maximum heat output.
1. Press down button for approx. 5 seconds. 
   The display alternately shows “unit” and the temperature unit:

   ![Display showing unit and temperature](image)

2. Press again button .
   The display alternately shows “rASd” and the actual setting of the set-point gradient:

   ![Display showing rASd and actual setting](image)

3. Set the desired ramp gradient with buttons (set-point gradient in °F or °C acc. to setting in chap. 6.4.1).
   The set value is automatically adopted after 2 seconds.

   During ramp operation the actual set-point (SP) continually rises in accordance to the entered gradient from the previously entered set-point to the new one (SP). The actual value follows the set-point value.

   About set-point display during ramp operation see chap. 6.2.

6.4.3 Chamber addressing

If several chambers are networked with a PC via the APT-COM™ 4 Multi Management Software (option, chap. 8.1), each chamber must be allocated a unique address. Addressing takes place on the chamber controller as follows:

1. Press down button for approx. 5 seconds. 
   The display alternately shows “unit” and the temperature unit:

   ![Display showing unit and temperature](image)

2. Press again button .
   The display alternately shows “rASd” and the set-point gradient:

   ![Display showing rASd and actual setting](image)

3. Press again button .
   The display alternately shows “Adr” and the actual setting of the chamber address:
4. Set the required address with buttons \( \downarrow \uparrow \). 

You can enter address values between 1 and 30.

The set value is automatically adopted after 2 seconds.

### 6.4.4 Selecting the timer function

The controller provides three different timer functions:

- **Delayed off** (setting “0”)
  After the defined time has elapsed, the heating is turned off.

- **Temperature-controlled delayed off** (setting “1”)
  The defined time only begins to run when the current value is by 1 °C below the set point. After the defined time has expired, the heating is turned off.

- **Delayed on** (setting “2”)
  After the time set has passed, the heating is turned on and remain in continuous operation.

1. Press down \( \downarrow \uparrow \) button for approx. 5 seconds.
   The display alternately shows “unit” and the temperature unit:

   ![Display Alternately Shows Unit and Temperature Unit]

2. Press again button \( \downarrow \uparrow \).
   The display alternately shows “rASd” and the set-point gradient:

   ![Display Alternately Shows rASd and Set-Point Gradient]

3. Press again button \( \downarrow \uparrow \).
   The display alternately shows “Adr” and the chamber address:

   ![Display Alternately Shows Adr and Chamber Address]

4. Press again button \( \downarrow \uparrow \).
   The display alternately shows “tFCt” and the actual setting of the timer function:

   ![Display Alternately Shows tFCt and Actual Setting]

5. Set the desired timer function 0, 1 or 2 with buttons \( \downarrow \uparrow \).
   The set value is automatically adopted after 2 seconds.
6.4.5 Setting the interface mode and, if appropriate, the printer interval

1. Press down button for approx. 5 seconds.
The display alternately shows “unit” and the temperature unit:

   ![Display showing "unit" and temperature](image)

2. Press again button.
The display alternately shows “rASd” and the set-point gradient:

   ![Display showing "rASd" and set-point gradient](image)

3. Press again button.
The display alternately shows “Adr” and the chamber address:

   ![Display showing "Adr" and address](image)

4. Press again button.
The display alternately shows “tFCt” and the timer function:

   ![Display showing "tFCt" and timer](image)

5. Press again button.
The display alternately shows “PFCt” and the actual setting of the interface mode:

   ![Display showing "PFCt" and interface mode setting](image)

6. Set the desired interface mode with buttons.

   **Settings:** Modbus = “0”  printer = “1”

   ![Warning icon]
   In case of temperature data acquisition by the APT-COM™ 4 Multi Management Software (option, chap. 8.1) interface mode "0" (Modbus) must be selected.

   The setting is automatically adopted after 2 seconds.

   If interface mode “1” (printer) has been selected, the printer interval for the automatic output can be set in an additional menu step:

7. Press again button.
The display alternately shows “Prt” and in the entry level the actual setting of the printer interval:

   ![Display showing "Prt" and printer interval](image)
8. Set the desired value from 0 to 255 with buttons \( \downarrow \) and \( \uparrow \). The printer intervals via the RS 422 interface can be set between 1 and 255 min. Setting “0” signifies the printer interval set to off. A protocol printer records the temperature data in the set interval. The set value is automatically adopted after 2 seconds.

6.5 Temperature programming example

The chamber shall heat up to a temperature of 50 °C, maintain this temperature for three hours and then turn off.

1. In normal display press down button \( \downarrow \) for 5 sec and then several times until “tFCt” is displayed
   • Select timer function “1” = “temperature-dependent delayed off” (chap. 6.4.4)

2. In normal display press button \( \uparrow \).
   • Enter the set point “50” (chap. 6.1)

3. In normal display press the time management button \( \bullet \). The controller displays the actual time function.
   • If necessary select the time function “Timer operation” (chap. 6.3.1)
   • In the entry level enter the desired time “3.00” (chap. 6.3.3)

6.6 General notes

- Approx. 30 sec. after the last entry the controller returns to normal display (actual value display).
- The functions set-point entry (chap. 6.1), time functions (chap. 6.3), and calling up the user menu (chap. 6.4) can only be selected from normal display (actual value display).
- When selecting the functions set-point entry and time functions, and when selecting the user menu functions, the respective button \( \downarrow \) or \( \bullet \) must be pressed down for a about 1 sec. Shorter pressing will be ignored by the controller.
- After a power failure, the timer returns to the previous status. A remaining time, if any, will continue running down.
- Adjust the temperature safety device following any changes of the set-point (chap. 7).
7. Temperature safety devices

7.1 Temperature safety device class 2 (DIN 12880)

The temperature safety device class 2 protects the chamber, its environment and the charging material from exceeding the maximum permissible temperature.

Please observe the DGUV guidelines 213-850 on safe working in laboratories (formerly BGI/GUV-I 850-0, BGR/GUV-R 120 or ZH 1/119, issued by the employers' liability insurance association) (for Germany).

In the event of a fault in the temperature controller, the safety device (7) permanently turns off the chamber. This status is reported visually by the indicator lamp (7a) and, in case of the option audible alarm with activated buzzer (chap. 7.3), by the buzzer sounding.

Check the operation of the safety device (7) by moving it slowly counter-clockwise until the chamber turns off. The safety device cut-off is reported visually by the indicator lamp (7a) and, in case of the option audible alarm with activated buzzer (chap. 7.3), by the buzzer sounding.

Then release again the safety device by pressing the reset button (7b) and turn on the chamber as described.

![Figure 6: Temperature safety device class 2](image)

Function:

The safety device class 2 is functionally and electrically independent of the temperature control device and turns off the chamber permanently.

If you turn the control knob (7) to its end-stop (position 10), the safety device protects the appliance. If you set it to a temperature a little above the controller's set-point temperature, it protects the charging material.

If the safety device has turned off the chamber, identifiable by the red alarm lamp (7a) lighting up and, in case of the option audible alarm with activated buzzer (chap. 7.3), by the buzzer sounding, proceed as follows:

- Disconnect the chamber from the power supply.
- Have an expert examine and rectify the cause of the fault.
- Release the safety device by pressing the reset button (7b).
- Restart the chamber as described in chap. 5.

Setting:

To check the response temperature of the safety device, turn on the chamber and set the desired set-point at the temperature controller.

The scale division from 1 to 10 corresponds to the temperature range from 30 °C / 86 °F up to 320 °C / 608 °F and serves as a setting aid.
1. Turn the control knob (7) of the safety device using a coin to its end-stop (position 10) (chamber protection).

2. When the set point is reached, turn back the control knob (7) until its trip point (turn it counter-clockwise).

3. The trip point is identifiable by the red alarm lamp (7a) lighting up; the reset button (7b) pops out.

With the option audible alarm and the buzzer activated (chap. 7.3), the buzzer sounds as an additional signal. You can turn it off with switch (11).

4. The optimum setting of the safety device is obtained by turning the control knob clockwise by approx. one graduation mark on the scale.

5. Push the reset button (7b) in again.

---

The chamber is only active with the reset button (7b) pushed in.

When the safety device class 2 responds, the red alarm lamp (7a) lights up, the reset button (7b) pops out, and the chamber turns off permanently.

Check the setting regularly and adjust it following any changes of the set-point.

**Function check:**

Check the temperature safety device class 2 at appropriate intervals for its functionality. It is recommended that the authorized operating personnel should perform such a check, e.g., before starting a longer work procedure.

7.2 **Temperature safety device class 3.1 (DIN 12880) (option)**

The temperature safety device class 3.1 serves to protect the chamber, its environment, and the charging material from exceeding the maximum permissible temperature.

Please observe the DGUV guidelines 213-850 on safe working in laboratories (formerly BGfI/GUV-I 850-0, BGR/GUV-R 120 or ZH 1/119, issued by the employers’ liability insurance association) (for Germany).

**Figure 7: Temperature safety device class 3.1**

**Function:**

The temperature safety device is functionally and electrically independent of the temperature control system and if an error occurs it performs a regulatory function. If you turn the control knob (7) to its end-stop (position 10), the safety device class 3.1 protects the chamber. If you set it to a temperature a little above the controller’s set-point temperature, it protects the charging material.
If the safety device has taken over control (identifiable by the red alarm lamp (7a) lighting up and, in case of the option audible alarm with activated buzzer (chap. 7.3), by the buzzer sounding), proceed as follows:

- Disconnect the chamber from the power supply.
- Have an expert examine and rectify the cause of the fault.
- Restart the chamber (see chap. 5).

**Adjustment:**

In order to check at which temperature the safety device class 3.1 responds, turn on the chamber and set the desired set-point on the temperature controller.

The sections of the scale from 1 to 10 correspond to the temperature range from 63 °C / 145.4 °F to 350 °C / 662 °F and serve as a setting aid.

1. Turn the control knob (7) of the safety device with a coin to its end-stop (chamber protection).
2. When the set point is reached, turn back the control knob (7) until its trip point (turn it counter-clockwise).
3. The trip point is identifiable by the red alarm lamp (7a) lighting up.

   With the option audible alarm and the buzzer activated (chap. 7.3), the buzzer sounds as an additional signal. You can turn it off with switch (11).

4. The optimum setting of the safety device is obtained by turning the control knob clockwise by approximately one scale division, which leads to extinguish the red alarm lamp (7a).

   ![Image](image1.jpg)

   Check the setting regularly and adjust it following any changes of the set-point.

**Function check:**

Check the temperature safety device class 3.1 at appropriate intervals for its functionality. It is recommended that the authorized operating personnel should perform such a check, e.g., before starting a longer work procedure.

**7.3 Disconnectable audible over-temperature alarm (option)**

This option permits activating an audible signal with the buzzer switch (11):

- Position 0 = buzzer off
- Position 1 = buzzer active

If the buzzer is activated, an audible signal sounds when the limit temperature set at the temperature safety device class 2 (chap. 7.1) or class 3.1 (chap. 7.2) is exceeded, this happens in addition to the red alarm pilot lamp (7a) lighting up. The buzzer can be turned off using the buzzer switch (11).

![Image](image2.jpg)

Turning off the audible alarm does not influence the safety device’s regulatory or turning-off function. Proceed as described in chap. 7.1 / 7.2.
8. Options

8.1 APT-COM™ 4 Multi Management Software (option)

The chamber is regularly equipped with a serial interface RS 422 that can connect the BINDER APT-COM™ 4 Multi Management Software. The connection to a computer is established using the chamber’s interface via an interface converter.

| Make sure that the interface mode is correctly set to “0” = “Modbus” in the user level (chap. 6.4.5). |

The actual temperature, and fan speed values are given at adjustable intervals. Programming can be performed graphically via PC. Up to 100 chambers can be cross linked. For further information, refer to the APT-COM™ 4 operating manual.

Pin allocation of the RS 422 interface:

- pin 2: RxD (+)
- pin 3: TxD (+)
- pin 4: RxD (-)
- pin 5: TxD (-)
- pin 7: Ground

| If several chambers are to be recorded via a PC, each one must be allocated a unique address. Addressing is performed via the chamber controller (see chap. 6.4.3). |

8.2 Data logger kit

BINDER Data Logger Kits offer an independent long-term measuring system for temperature. They are equipped with a keyboard and a large LCD display, alarm functions and a real-time function. Measurement data are recorded in the Data Logger and can be read out after the measurement via the RS232 interface of the Data Logger. It offers a programmable measuring interval and permits storing up to 64000 measuring values. Reading out is done with the Data Logger evaluation software. You can give out a combined alarm and status protocol directly to a serial printer.

Data Logger Kit T 350: Temperature range 0 °C / 32 °F up to +350 °C / 662 °F

| For detailed information on installation and operation of the BINDER Data Logger, please refer to the mounting instructions Art. No. 7001-0204 and to the original user manual of the manufacturer, supplied with the data logger. |

8.3 HEPA fresh air filter (option)

With this option, the introduced fresh air is cleaned by means of a high efficiency submicron particulate air filter type HEPA class H 14 (acc. to DIN EN 1822:2009). Replace the filter insert, if necessary, by removing the metal cover of the filter at the left side of the chamber (Art. No. 6014-0003).
8.4 Analog output for temperature (option)

With this option the chamber is equipped with an analog output 4-20 mA for temperature. This output permits transmitting data to external data registration systems or devices.

The connection is carried out as a DIN socket at the rear of the chamber as follows:

**ANALOG OUTPUT 4-20 mA DC**

<table>
<thead>
<tr>
<th>PIN 1:</th>
<th>temperature –</th>
</tr>
</thead>
<tbody>
<tr>
<td>PIN 2:</td>
<td>temperature +</td>
</tr>
</tbody>
</table>

Temperature range:
0 °C to +300 °C

A suitable DIN plug is enclosed.

Figure 8: Pin allocation of DIN socket for option analogue outputs

9. Maintenance, cleaning, and service

9.1 Maintenance intervals, service

**DANGER**

Electrical hazard.
Danger of death.
∅ The chamber must NOT become wet during operation or maintenance work.
∅ Do NOT remove the rear panel of the chamber.
➢ Before conducting maintenance work, turn off the chamber at the main power switch and disconnect the power plug.
➢ Ensure all maintenance work is conducted by licensed electricians or experts authorized by BINDER.

Ensure regular maintenance work is performed at least once a year.

The warranty becomes void if maintenance work is conducted by non-authorized personnel.

Replace the door gasket only when cold. Otherwise, the door gasket may become damaged.
We recommend taking out a maintenance agreement. Please consult BINDER Service.

International customers, please contact your local BINDER distributor.

9.2 Cleaning and decontamination

Clean the chamber after each use to avoid potential corrosion damage by ingredients of the test material.

**DANGER**

Electrical hazard.
Danger of death.

- Do NOT spill water or cleaning agents over the inner and outer surfaces.
- Before cleaning, turn off the chamber at the main power switch and disconnect the power plug.
- Completely dry the appliance before turning it on again.

9.2.1 Cleaning

Disconnect the chamber from the power supply before cleaning. Disconnect the power plug.

The interior of the chamber must be kept clean. Thoroughly remove any residues of the charging material.

Wipe the surfaces with a moistened towel. In addition, you can use the following cleaning agents:

<table>
<thead>
<tr>
<th>Surface Type</th>
<th>Cleaning Agents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exterior surfaces</td>
<td>Standard commercial cleaning detergents free from acid or halides.</td>
</tr>
<tr>
<td>inner chamber</td>
<td>Alcohol-based solutions.</td>
</tr>
<tr>
<td>racks</td>
<td>We recommend using the neutral cleaning agent Art. No. 1002-0016.</td>
</tr>
<tr>
<td>door gaskets</td>
<td></td>
</tr>
<tr>
<td>Instrument panel</td>
<td>Standard commercial cleaning detergents free from acid or halides.</td>
</tr>
<tr>
<td>Zinc coated hinge parts</td>
<td>We recommend using the neutral cleaning agent Art. No. 1002-0016.</td>
</tr>
<tr>
<td>rear chamber wall</td>
<td></td>
</tr>
</tbody>
</table>

Do NOT use a neutral cleaning agent on zinc coated surfaces.

Do not use cleaning agents that may cause a hazard due to reaction with components of the device or the charging material. If there is doubt regarding the suitability of cleaning products, please contact BINDER service.
We recommend using the neutral cleaning agent Art. No. 1002-0016 for a thorough cleaning. Any corrosive damage that may arise following use of other cleaning agents is excluded from liability by BINDER GmbH. Any corrosive damage caused by a lack of cleaning, is excluded from liability by BINDER GmbH.

**CAUTION**

danger of corrosion.

damage to the chamber.

🚫 do not use acidic or chlorine cleaning detergents.

🚫 do not use a neutral cleaning agent on other kind of surfaces e.g., the zinc coated hinge parts or the rear chamber wall.

For surface protection, perform cleaning as quickly as possible. After cleaning, completely remove cleaning agents from the surfaces with a moistened towel. Let the chamber dry.

Soapsuds may contain chlorides and must therefore NOT be used for cleaning.

With every decontamination method, always use adequate personal safety controls.

Following cleaning, leave the chamber door open or remove the access port plugs.

The neutral cleaning agent may cause health problems in contact with skin and if ingested. Follow the operating instructions and safety hints labeled on the bottle of the neutral cleaning agent.

Recommended precautions: To protect the eyes use sealed protective goggles. Suitable protective gloves with full contact: butyl or nitrile rubber, penetration time >480 minutes.

**CAUTION**

contact with skin, ingestion.

skin and eye damage due to chemical burns.

🚫 do not ingest. Keep away from food and beverages.

🚫 do not empty into drains.

➢ wear protective gloves and goggles.

➢ avoid skin contact.
9.2.2 Decontamination

The operator must ensure that proper decontamination is performed in case a contamination of the chamber by hazardous substances has occurred.

Disconnect the chamber from the power supply prior to decontamination. Pull the power plug.

Do not use decontamination agents that may cause a hazard due to reaction with components of the device or the charging material. If there is doubt regarding the suitability of cleaning products, please contact BINDER service.

You can use the following disinfectants:

<table>
<thead>
<tr>
<th>Inner chamber</th>
<th>Standard commercial surface disinfectants free from acid or halides.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Alcohol-based solutions.</td>
</tr>
<tr>
<td></td>
<td>We recommend using the disinfectant spray Art. No. 1002-0022.</td>
</tr>
</tbody>
</table>

For chemical disinfection, we recommend using the disinfectant spray Art. No. 1002-0022. Any corrosive damage that may arise following use of other disinfectants is excluded from liability by BINDER GmbH.

With every decontamination method, always use adequate personal safety controls.

In case of impurity of the interior with biological or chemical hazardous material, there are three possible procedures depending on the type of contamination and of the charging material.

1. The chambers can be hot air sterilized at 190 °C for at least 30 minutes. All inflammable goods must be removed from the interior before.

2. Spray the inner chamber with an appropriate disinfectant. Before start-up, the chamber must be absolute dry and ventilated, because explosive gases may form during the decontamination process.

3. If necessary, have strongly contaminated inner chamber parts removed by an engineer for cleaning, or have them exchanged. Sterilize the inner chamber parts in a sterilizer or autoclave.

In case of eye contact, the disinfectant spray may cause eye damage due to chemical burns. Follow the operating instructions and safety hints labeled on the bottle of the disinfectant spray.

Recommended precautions: To protect the eyes use sealed protective goggles.

CAUTION

Eye contact.
Eye damage due to chemical burns.

- Do NOT empty into drains.
- Wear protective goggles.

After using the disinfectant spray, allow the chamber to dry thoroughly, and aerate it sufficiently.
9.3 Sending the chamber back to BINDER GmbH

If you send a BINDER product to us for repair or any other reason, we will only accept the product upon presentation of an authorization number that has previously been issued to you. We will issue an authorization number (RMA number) after receiving your complaint either in writing or by telephone prior to your sending the BINDER product back to us. The authorization number will be issued following receipt of the information below:

- BINDER product type and serial number
- Date of purchase
- Name and address of the dealer from which you bought the BINDER product
- Exact description of the defect or fault
- Complete address contact person and availability of that person
- Exact location of the BINDER product in your facility
- A contamination clearance certificate (chap. 15) must be faxed in advance

The authorization number must be applied to the packaging in such a way that it can be easily recognized or be recorded clearly in the delivery documents.

For security reasons we cannot accept a chamber delivery if it does not carry an authorization number.

Return address: BINDER GmbH Abteilung Service Gänsäcker 16 78502 Tuttlingen Germany

10. Disposal

10.1 Disposal of the transport packing

</tbody>
</table>

If recycling is not possible, all packing parts can also be disposed of with normal waste.
10.2 Decommissioning

Turn off chambers at the main power switch (10) and disconnect the chamber from the power supply (pull the power plug).

When turning off the main power switch ON / OFF (10), the stored parameters remain saved.

- Temporal decommissioning: See indications for appropriate storage, chap. 3.3.
- Final decommissioning: Dispose of the chamber as described in chap. 10.3 to 10.5

10.3 Disposal of the chamber in the Federal Republic of Germany

According to Annex I of Directive 2012/19/EU of the European Parliament and of the Council on waste electrical and electronic equipment (WEEE), BINDER devices are classified as “monitoring and control instruments” (category 9) only intended for professional use”. They must not be disposed of at public collecting points.

The chambers bear the symbol for the marking of electrical and electronic equipment manufactured / placed on the market in the EC after 13 August 2005 and be disposed of in separate collection according to Directive 2012/19/EU on waste electrical and electronic equipment (WEEE) and German national law for electrical and electronic equipment (Elektro- und Elektronikgerätegesetz, ElektroG). WEEE marking: crossed-out wheeled bin with solid bar under. A significant part of the materials must be recycled in order to protect the environment.

At the end of the device’s service life, have the device disposed of according to the German national law for electrical and electronic equipment (Elektro- und Elektronikgerätegesetz, ElektroG from 20 October 2015, BGBl. I p. 1739) or contact BINDER service who will organize taking back and disposal of the chamber according to the German national law for electrical and electronic equipment (Elektro- und Elektronikgerätegesetz, ElektroG from 20 October 2015, BGBl. I p. 1739).

CAUTION

Violation against existing law.

- Do NOT dispose of BINDER devices at public collecting points.
- Have the device disposed of professionally at a recycling company which is certified according to the German national law for electrical and electronic equipment (Elektro- und Elektronikgerätegesetz, ElektroG from 20 October 2015, BGBl. I p. 1739).
- Instruct BINDER Service to dispose of the device. The general terms of payment and delivery of BINDER GmbH apply, which were valid at the time of purchasing the chamber.

Certified companies disassemble waste BINDER equipment in primary substances for recycling according to Directive 2012/19/EU. In order to eliminate any health hazards to the employees of the recycling companies, the devices must be free from toxic, infectious or radioactive substances.
Prior to handing the chamber over to a recycling company, it is the user’s responsibility that it is free from toxic, infectious or radioactive substances. 
Prior to disposal, clean all introduced or residual toxic substances from the chamber. 
Prior to disposal disinfect the chamber from all sources of infection. Be aware of the fact that sources of infection may also be located outside the inner chamber. 
If you cannot safely remove all toxic substances and sources of infection from the chamber, dispose of it as “special” waste according to national law. 
Fill out the contamination clearance certificate (chap. 15) and enclose it with the chamber.

**WARNING**

Contamination of the device with toxic, infectious or radioactive substances.

*Danger of intoxication.*

*Danger of infection.*

NEVER take a chamber contaminated with toxic substances or sources of infection for recycling according to Directive 2012/19/EU.

- Prior to disposal, remove all toxic substances and sources of infection from the chamber.
- Dispose of a chamber from which all toxic substances or sources of infection cannot be safely removed as special waste according to national law.

10.4 Disposal of the chamber in the member states of the EU except for the Federal Republic of Germany

According to Annex I of Directive 2012/19/EU of the European Parliament and of the Council on waste electrical and electronic equipment (WEEE), BINDER devices are classified as “monitoring and control instruments” (category 9) only intended for professional use”. They must not be disposed of at public collecting points.

The chambers bear the symbol for the marking of electrical and electronic equipment manufactured / placed on the market in the EC after 13 August 2005 and be disposed of in separate collection according to the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE). WEEE marking: crossed-out wheeled bin with solid bar under.

At the end of the device’s service life, notify the distributor who sold you the device, who will take back and dispose of the chamber according to the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE).

**CAUTION**

Violation against existing law.

NEVER dispose of BINDER devices at public collecting points.

- Have the device disposed of professionally at a recycling company which is certified according to conversion of the Directive 2012/19/EU into national law.
  - or
- Instruct the distributor who sold you the device to dispose of it. The agreements apply that were reached with the distributor when purchasing the chamber (e.g. his general terms of payment and delivery).
- If your distributor is not able to take back and dispose of the chamber, please contact BINDER service.
Certified companies disassemble waste BINDER equipment in primary substances for recycling according to Directive 2012/19/EU. In order to exclude any health hazard for the employees of the recycling companies, the devices must be free from toxic, infectious or radioactive substances.

Prior to handing the chamber over to a recycling company, it is the user’s responsibility that it is free from toxic, infectious or radioactive substances. Prior to disposal, clean all introduced or residual toxic substances from the chamber. Prior to disposal, disinfect the chamber from all sources of infection. Be aware of the fact that sources of infection may also be located outside the inner chamber. If you cannot safely remove all sources of infection and toxic substances from the chamber, dispose of it as “special” waste according to national law. Fill out the contamination clearance certificate (chap. 15) and enclose it with the chamber.

WARNING
Contamination of the device with toxic, infectious or radioactive substances.
Danger of intoxication.
Danger of infection.
Ø NEVER take a chamber contaminated with toxic substances or sources of infection for recycling according to Directive 2012/19/EU.
➢ Prior to disposal, remove all toxic substances and sources of infection from the chamber.
➢ Dispose of a chamber from which all toxic substances or sources of infection cannot be safely removed as “special” waste according to national law.

10.5 Disposal of the chamber in non-member states of the EU

CAUTION
Alteration of the environment.
➢ For final decommissioning and disposal of the chamber, please contact BINDER Service.
➢ Follow the statutory regulations for appropriate, environmentally friendly disposal.

</table>

Only qualified service personnel authorized by BINDER must perform repair. Repaired chambers must comply with the BINDER quality standards.
12. Technical description

12.1 Factory calibration and adjustment

This chamber was calibrated and adjusted in the factory. Calibration and adjustment were performed using standardized test instructions, according to the QM DIN EN ISO 9001 system applied by BINDER (certified since December 1996 by TÜV CERT). All test equipment used is subject to the administration of measurement and test equipment that is also constituent part of the BINDER QM DIN EN ISO 9001 systems. They are controlled and calibrated to a DKD-Standard at regular intervals.

12.2 Definition of usable volume

The usable volume illustrated below is calculated as follows:

\[ V_{USE} = (A - 2a) \times (B - 2b) \times (C - 2c) \]

A, B, C = Internal dimensions (W, H, D)

a, b, c = Wall clearances

\[ a = 0.1 \times A \]
\[ b = 0.1 \times B \]
\[ c = 0.1 \times C \]

The technical data refers to the defined usable volume.

Do NOT place samples outside this usable volume.
Do NOT load this volume by more than half to enable sufficient airflow inside the chamber.
Do NOT divide the usable volume into separate parts with large area samples.
Do NOT place samples too close to each other in order to permit circulation between them and thus obtain a homogenous distribution of temperature.

12.3 Over current protection

The chambers are equipped with internal fuses not accessible from outside. If these fuses are blown, please inform an electronic engineer or BINDER Service.

All technical data is specified for unloaded chambers with standard equipment at an ambient temperature of +22 °C +/- 3 °C / 71.6 °F +/- 5.4 °F and a power supply voltage fluctuation of +/- 10. Technical data is determined in accordance to BINDER Factory Standard Part 1:2015 following DIN 12880:2007.

**All indications are average values, typical for chambers produced in series. We reserve the right to change technical specifications at any time.**

If the chamber is fully loaded, the specified heating up times may vary according to the load.

### 12.5 Equipment and options (extract)

To operate the chamber, use only original BINDER accessories or accessories / components from third-party suppliers authorized by BINDER. The user is responsible for any risk arising from using unauthorized accessories.

Die oben beschriebenen Maschinen sind konform mit folgenden EG/EU-Richtlinien (gemäß Veröffentlichung im Amtsblatt der europäischen Kommission):

The machines described above are in conformity with the following EC/EU Directives (as published in the Official Journal of the European Union):

Les machines décrites ci-dessus sont conformes aux directives CE/UE suivantes (selon leur publication dans le Journal officiel de l’Union européenne):

La máquina descrita arriba cumple con las siguientes directivas de la CE/UE (publicadas en el Diario oficial de la Unión Europea):

Le macchine sopra descritte sono conforme alle seguenti direttive CE/UE (secondo la pubblicazione nella Gazzetta ufficiale della Commissione europea):

Машиннуказанная выше, полностью соответствует следующим регламентам EC/EU (опубликованным в Официальном журнале Европейского Сообщества):

- **2006/42/EC**

- **2014/30/EU**

- **2011/65/EU**

The machines described above are conform to the mentioned EC/EU directives in regard to the relevant safety and health demands due to their conception and style of construction as well as to the version put onto market by us.

Les machines décrites ci-dessus correspondent aux demandes de sécurité et de santé des directives citées de la CE/UE due à leur conception et construction et dans la réalisation mise sur le marché par nous.

Las máquinas descritas arriba se corresponden con los requisitos básicos pertinentes de seguridad y salud de las citadas directivas de la CE/UE debido a su concepción y fabricación, así como a la realización llevada a cabo por nosotros.

Le macchine sopra descritte sono conforme ai requisiti essenziali di sicurezza e salute pertinenti delle summenzionate direttive CE/UE in termini di progettazione, tipo di costruzione e esecuzione messa da noi in circolazione.

Машины описано выше, соответствуют указанным директивам EC/EU в отношении требований соответствующей безопасности и здоровья по концепции и конструкции так же как и версия, применяемая нами на рынке.

Die oben beschriebenen Maschinen tragen entsprechend die Kennzeichnung CE.

The machines described above, corresponding to this, bear the CE-mark.

Les machines décrites ci-dessus, en correspondance, portent l’indication CE.

Las máquinas descritas arriba, en conformidad, llevan la indicación CE.

Le macchine sopra descritte sono contrassegnate dal marchio CE.

Машины описано выше, в соответствии с изложенным выше маркированы знаком CE.

Die oben beschriebenen Maschinen sind konform mit folgenden harmonisierten Normen:

The machines described above are in conformity with the following harmonized standards:

Les machines décrites ci-dessus sont conformes aux normes harmonisées suivantes:

Las máquinas descritas arriba cumplen con las siguientes normas:

Normalausführung  
Bei einer Höhe von 20 mm oder weniger auch zulässige Ausführung

1. Der Zertifikatsinhaber hat die Voraussetzungen einzuhalten, die bei der Herstellung des umseitig genannten Produktes zu beachten sind, um die Übereinstimmung mit dem geprüften Baumuster zu gewährleisten.

3. Die für die Herstellung verantwortliche Person hat sich zur Einhaltung der Voraussetzungen nach Nummer 1 und Duldung der Kontrollmaßnahmen verpflichtet.

4. Die Prüf- und Zertifizierungsstelle entzieht dem Zertifikatsinhaber die Zuverkennung des GS-Zeichens, wenn sich die Anforderungen nach § 21 Absatz 1 Produktsicherheitsgesetz geändert haben oder die Voraussetzungen nach Nummer 1 nicht eingehalten werden.

5. Das GS-Zeichen darf nur verwendet und mit ihm darf nur geworben werden, wenn die Voraussetzungen nach § 22 Produktsicherheitsgesetz erfüllt sind.
14. Product registration

Online Product Registration
Register your BINDER now!

www.binder-world.com/register

The registration is free and takes just a few seconds.
Advantages:

- Short response times if service is needed
- Fair prices when relocating or installing equipment
- Calibration as required at no charge in case of recalls
- Free information on news, product upgrades and accessories

Easy registered in 3 steps:

1. List serial number here:  

2. Go online: www.binder-world.com/register

3. Register serial number
15. Contamination clearance certificate

15.1 For chambers located outside the USA and Canada

Declaration with regard to safety and health

Erklärung zur Sicherheit und gesundheitlichen Unbedenklichkeit

The German Ordinance on Hazardous Substances (GefStofV), and the regulations regarding safety at the workplace, require that this form be filled out for all products that are returned to us, so that the safety and health of our employees can be warranted.

Die Sicherheit und Gesundheit unserer Mitarbeiter, die Gefahrstoffverordnung GefStofV und die Vorschriften zur Sicherheit am Arbeitsplatz machen es erforderlich, dass dieses Formblatt für alle Produkte, die an uns zurückgeschickt wird.

| In the absence of a completely filled out form, a repair is not possible. | Ohne Vorliegen des vollständig ausgefüllten Formblattes ist eine Reparatur nicht möglich. |

- A completely filled out form should be transmitted by Fax (+49 (0) 7462 2005 93555) or by letter in advance to us, so that this information is available before the equipment/component part arrives. A second copy of this form should accompany the equipment/component part. Eventually the carrier should be informed.

Eine vollständig ausgefüllte Kopie dieses Formblattes soll per Telefax (Nr. +49 (0) 7462 2005 93555) oder Brief vorab an uns gesandt werden, so dass die Information vorliegt, bevor das Gerät/Bauteil eintrifft. Eine weitere Kopie soll dem Gerät/Bauteil beigefügt sein. Ggf. ist auch die Spedition zu informieren.

- Incomplete information or non-conformity with this procedure will inevitably lead to substantial delays in processing. We hope you will have understanding for this measure, which lies outside of our area of influence, and that you will help us to speed up this procedure.

- Please fill out this form completely.

Bitte unbedingt vollständig ausfüllen!

## 4. Declaration of Decontamination

For toxic, radioactive, biologically and chemically harmful or hazardous substances, or any other hazardous materials.

We hereby guarantee that

4.1 Any hazardous substances, which have come into contact with the above-mentioned equipment / component part, have been completely listed under item 3.1 and that all information in this regard is complete.

4.2 That the unit / component part has not been in contact with radioactivity

4.3 Any hazardous substances were removed from the unit / component part, so that no hazard exists for a persons in the shipping, handling or repair of these returned unit

4.4 The unit was securely packaged in the original undamaged packaging and properly identified on the outside of the packaging material with the unit designation, the RMA number and a copy of this declaration.

4.5 Shipping laws and regulations have not been violated.

I hereby commit and guarantee that we will indemnify BINDER Inc for all damages that are a consequence of incomplete or incorrect information provided by us, and that we will indemnify and hold harmless BINDER Inc. from eventual damage claims by third parties.
