Dear customer,

For the correct operation of the chambers, it is important that you read this operating manual completely and carefully and observe all instructions as indicated. Failure to read, understand and follow the instructions may result in personal injury. It can also lead to damage to the chamber and/or poor equipment performance.

1. Safety

This operating manual is part of the components of delivery. Always keep it handy for reference. The device should only be operated by laboratory personnel especially trained for this purpose and familiar with all precautionary measures required for working in a laboratory. Observe the national regulations on minimum age of laboratory personnel. To avoid injuries and damage observe the safety instructions of the operating manual.

**WARNING**

Failure to observe the safety instructions.
Serious injuries and chamber damage.

- Observe the safety instructions in this operating manual
- Carefully read the complete operating instructions of the chambers.

1.1 Legal considerations

This operating manual is for informational purposes only. It contains information for installing, start-up, operation and maintenance of the product. Note: the contents and the product described are subject to change without notice.

Understanding and observing the instructions in this operating manual are prerequisites for hazard-free use and safety during operation and maintenance. In no event shall BINDER be held liable for any damages, direct or incidental arising out of or related to the use of this manual.

This operating manual cannot cover all conceivable applications. If you would like additional information, or if special problems arise that are not sufficiently addressed in this manual, please ask your dealer or contact us directly by phone at the number located on page one of this manual.

Furthermore, we emphasize that the contents of this operating manual are not part of an earlier or existing agreement, description, or legal relationship, nor do they modify such a relationship. All obligations on the part of BINDER derive from the respective purchase contract, which also contains the entire and exclusively valid statement of warranty administration. The statements in this manual neither augment nor restrict the contractual warranty provisions.

1.2 Structure of the safety instructions

In this operating manual, the following safety definitions and symbols indicate dangerous situations following the harmonization of ISO 3864-2 and ANSI Z535.6.

1.2.1 Signal word panel

Depending on the probability of serious consequences, potential dangers are identified with a signal word, the corresponding safety color, and if appropriate, the safety alert symbol.

**DANGER**

Indicates an imminently hazardous situation that, if not avoided, will result in death or serious (irreversible) injury.
### 1.2.2 Safety alert symbol

Use of the safety alert symbol indicates a **risk of injury**.

Observe all measures that are marked with the safety alert symbol in order to avoid death or injury.

### 1.2.3 Pictograms

#### Warning signs

<table>

### 1.5 General safety instructions on installing and operating the chambers

With regard to operating the chambers and to the installation location, please observe the DGUV guidelines 213-850 on safe working in laboratories (formerly BGI/GUV-I 850-0, BGR/GUV-R 120 or ZH 1/119, issued by the employers’ liability insurance association) (for Germany).

BINDER GmbH is only responsible for the safety features of the chamber provided skilled electricians or qualified personnel authorized by BINDER perform all maintenance and repair, and if components relating to chamber safety are replaced in the event of failure with original spare parts.

To operate the chamber, use only original BINDER accessories or accessories from third-party suppliers authorized by BINDER. The user is responsible for any risk caused by using unauthorized accessories.

#### CAUTION

**Danger of overheating.**

**Damage to the chamber.**

- Do NOT install the chamber in unventilated recesses.
- Ensure sufficient ventilation for dispersal of the heat.

Do not operate the chambers in hazardous locations.

#### DANGER

**Explosion hazard.**

**Danger of death.**

- Do NOT operate the chamber in potentially explosive areas.
- KEEP explosive dust or air-solvent mixtures AWAY from the chamber.

The chambers do not dispose of any measures of explosion protection.

#### DANGER

**Explosion hazard.**

**Danger of death.**

- Do NOT introduce any substance into the chamber which is combustible or explosive at working temperature.
- NO explosive dust or air-solvent mixture in the inner chamber.

Any solvent contained in the charging material must not be explosive or inflammable. I.e., irrespective of the solvent concentration in the steam room, NO explosive mixture with air must form. The temperature inside the chamber must lie below the flash point or below the sublimation point of the charging material. Familiarize yourself with the physical and chemical properties of the charging material, as well as the contained moisture constituent and its behavior with the addition of heat energy.

Familiarize yourself with any potential health risks caused by the charging material, the contained moisture constituent or by reaction products that may arise during the temperature process. Take adequate measures to exclude such risks prior to putting the chamber into operation.

</tr>
<tr>
<td></td>
<td>CAN/CSA-C22.2 No. 61010-2-10</td>
</tr>
</tbody>
</table>
DANGER

Electrical hazard.
Danger of death.
∅ The chamber must NOT become wet during operation or maintenance.

The chambers were produced in accordance with VDE regulations and were routinely tested in accordance to VDE 0411-1 (IEC 61010-1).

During and shortly after operation, the temperature of the inner surfaces almost equals the set-point.

CAUTION

The glass doors and glass door handles (BD-S / BD-S-UL), inner chamber, exhaust air flap, door window (option), and the door gaskets will become hot during operation.

Danger of burning.
∅ Do NOT touch the glass doors, inner surfaces, exhaust air flap, door window, access ports, door gaskets, or the charging material during operation.
∅ FD-S / FD-S-UL: Do not place the power cable over the door gap when the chamber is hot after operation.

1.6 Intended use

The chambers are suitable for exact tempering of harmless materials and for drying and heat treatment of solid or pulverized charging material, as well as bulk material, using the supply of heat. They can be used to dry e.g. glassware, and for warm storage of liquids in containers.

Because of their precise temperature accuracy the incubators BD-S / BD-S-UL are especially useful for incubation of cultures at a standard temperature of 37 °C / 98.6 °F.

A solvent content must not be explosive or flammable. A mixture of any component of the charging material with air must NOT be explosive. The operating temperature must lie below the flash point or below the sublimation point of the charging material. Any component of the charging material must NOT be able to release toxic gases.

Other applications are not approved.

The chambers are not classified as medical devices as defined by the Medical Device Directive 93/42/EEC.

Do NOT use the chamber for drying processes when large quantities of vapor would form and result in condensation.

Due to the special demands of the Medical Device Directive 93/42/EEC, these ovens are not qualified for sterilization of medical devices as defined by the directive.

Observing the instructions in this operating manual and conducting regular maintenance work (chap. 13) is part of the intended use.

WARNING: If customer should use a BINDER chamber running in non-supervised continuous operation, we strongly recommend in case of inclusion of irrecoverable specimen or samples to split such specimen or samples and store them in at least two chambers, if this is feasible.

The charging material shall not contain any corrosive ingredients that may damage the machine components. Such ingredients include in particular acids and halides. Any corrosive damage caused by such ingredients is excluded from liability by BINDER GmbH.
The chambers do not dispose of any measures of explosion protection.

**DANGER**

Explosion or implosion hazard.
Danger of poisoning.
Danger of death.

Do NOT introduce any substance combustible or explosive at working temperature into the chamber, in particular no energy sources such as batteries or lithium-ion batteries.

NO explosive dust or air-solvent mixture in the inner chamber.

Do NOT introduce any substance which could lead to release of toxic gases.

In case of foreseeable use of the device there is no risk for the user through the integration of the chamber into systems or by special environmental or operating conditions in the sense of EN 61010-1:2010. For this, the intended use of the chamber and all its connections must be observed.

## 2. Chamber description

The incubators BD-S / BD-S-UL indicate the temperature with an accuracy of a tenth of a degree.

The drying and heating ovens ED-S / ED-S-UL and FD-S / FD-S-UL indicate the temperature with an accuracy of one degree.

All chambers are heated electrically. Incubators BD-S / BD-S-UL and drying and heating ovens ED-S / ED-S-UL are ventilated naturally. Drying and heating ovens FD-S / FD-S-UL are ventilated by fan-assisted, forced-air circulation.

The concept of air conduction guarantees high level of spatial and time-based temperature precision, thanks to the direct and distributed air circulation into the interior. With FD-S / FD-S-UL, the fan supports exact attainment and maintenance of the desired temperature accuracy.

The chambers are regularly equipped with an overtemperature safety device class 1 acc. to DIN12880:2007 and with an overtemperature safety controller (overtemperature temperature safety device class 2 (ED-S / ED-S-UL, FD-S / FD-S-UL) or class 3.1(BD-S / BD-S-UL) acc. to DIN12880:2007), see chap. 8.

The inner chamber and the inside of the doors are made of stainless steel V2A (German material no. 1.4016, US equivalent AISI 430). Drying and heating ovens ED-S / ED-S-UL and FD-S / FD-S-UL: When operating the chambers at temperatures above 150 °C / 302 °F, the impact of the oxygen in the air may cause discoloration of the metallic surfaces (yellowish-brown or blue) by natural oxidation processes. These colorations are harmless and will in no way impair the function or quality of the chamber.

All chamber functions are easy and comfortable to use thanks to their clear arrangement. Major features are easy cleaning of all chamber parts and avoidance of undesired contamination.

Temperature ranges see technical data (chap. 16.4).

3.  Completeness of delivery, transportation, storage, and installation

3.1  Unpacking, and checking equipment and completeness of delivery

After unpacking, please check the chamber and its optional accessories, if any, based on the delivery receipt for completeness and for transportation damage. Inform the carrier immediately if transportation damage has occurred.

The final tests of the manufacturer may have caused traces of the racks on the inner surfaces. This has no impact on the function and performance of the chamber.

Please remove any transportation protection devices and adhesives in/on the chamber and on the doors and take out the operating manuals and accessory equipment.

<table>

<tr>
<td>✗ Do NOT lift or transport the chamber using the door handle or the door.</td>
</tr>
<tr>
<td>✓ Lift the chamber from the pallet at its four lower corners with the aid of 2 people.</td>
</tr>
</tbody>
</table>

If you need to return the chamber, please use the original packing and observe the guidelines for safe lifting and transportation (chap. 3.2).

For disposal of the transport packing, see chap. 14.1.
Note on second-hand chambers (Ex-Demo-Units):

Second-hand chambers are chambers that have been used for a short time for tests or exhibitions. They are thoroughly tested before resale. BINDER ensures that the chamber is technically sound and will work flawlessly.

Second-hand chambers are marked with a sticker on the chamber door. Please remove the sticker before commissioning the chamber.

3.2 Guidelines for safe lifting and transportation

After operation please observe the guidelines for temporarily decommissioning the chamber (chap. 14.2).

<table>

</tr>
<tr>
<td>- Lift chamber at its four lower corners with the aid of 2 people, and place it on a transport pallet with wheels. Push the pallet to the desired site and then lift the chamber from the pallet at its four lower corners.</td>
</tr>
</tbody>
</table>

• Permissible ambient temperature range during transport: -10 °C to +60 °C / 14 °F to 140 °F.

You can order transport packing and pallets for transportation purposes from BINDER Service.

3.3 Storage

Intermediate storage of the chamber is possible in a closed and dry room. Observe the guidelines for temporary decommissioning (chap. 14.2).

• Permissible ambient temperature range during storage: -10 °C to +60 °C / 14 °F to 140 °F.
• Permissible ambient humidity: max. 70 % r.h., non-condensing

When after storage in a cold location you transfer the chamber to its warmer installation site, condensation may form. Before start-up, wait at least one hour until the chamber has attained ambient temperature and is completely dry.

3.4 Location of installation and ambient conditions

Set up the chamber on an even and non-flammable surface, free from vibration and in a well-ventilated, dry location and align it using a spirit level. The site of installation must be capable of supporting the chamber’s weight (see technical data, chap. 16.4). The chambers are designed for setting up inside a building (indoor use).

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Danger of overheating.</td>
</tr>
<tr>
<td>Damage to the chamber.</td>
</tr>
<tr>
<td>- Do NOT set up chambers in non-ventilated recesses.</td>
</tr>
<tr>
<td>- Ensure sufficient ventilation for dispersal of the heat.</td>
</tr>
</tbody>
</table>
- Permissible ambient temperature range during operation: +18 °C up to +40 °C / 64.4 °F to 104 °F. At elevated ambient temperature values, fluctuations in temperature can occur.

The ambient temperature should not be substantially higher than the indicated ambient temperature of +22 °C +/- 3 °C / 71.6 °F ± 5.4 °F to which the specified technical data relate. For other ambient conditions, deviations from the indicated data are possible.

- Permissible ambient humidity: 70 % r.H. max., non-condensing.
- Installation height: max. 2000 m / 6562 ft. above sea level.

When placing several chambers of the same size side by side, maintain a minimum distance of 250 mm / 9.84 in between each chamber. Wall distances: rear 160 mm / 6.30 in, sides 100 mm / 3.94 in. Spacing above the chamber of at least 160 mm / 6.30 in must also be accounted for.

The chambers must NOT be stacked.

**CAUTION**

Danger by stacking. 
Damage to the chambers. 
☐ Do NOT place chambers on top of each other.

To completely separate the chamber from the power supply, you must disconnect the power plug. Install the chamber in a way that the power plug is easily accessible and can be easily pulled in case of danger.

For the user there is no risk of temporary overvoltages in the sense of EN 61010-1:2010.

Do not install or operate the chamber in potentially explosive areas.

**DANGER**

Explosion hazard. 
Danger of death. 
☐ Do NOT operate the chamber in potentially explosive areas. 
➢ KEEP explosive dust or air-solvent mixtures AWAY from the vicinity of the chamber.

4. Installation

4.1 Installing the racks

Insert 4 rack supports for each rack into the slots of the lateral inner chamber walls. They serve as a support for the rack.

Figure 6: Rack with rack support
4.2 Connection to an exhaust/ventilation system (optional)

Active suction from the chamber must only be effected together with external air. Therefore, the exhaust air outlet on the top of the chamber shall not be immediately connected to an active exhaust system.

When connecting to an active exhaust system, proceed as follows:

- Remove the black exhaust air flap.
- Perforate the connecting piece of the exhaust system or place an exhaust air funnel in a distance of 3-5 cm / 1 to 2 in from the exhaust air outlet. The funnel’s opening must be at least twice as large as the diameter of the exhaust air outlet.

If improperly connected to an active exhaust/ventilation system, the spatial temperature exactitude (uniformity), the heating-up and recovering times as well as the maximum temperature of the chamber may be negatively affected.

CAUTION

The exhaust air outlet on the top of the chamber will become hot during operation. Danger of burning.

Do NOT touch the exhaust air outlet during operation.

4.3 Electrical connection

The chambers are supplied ready for connection and come with an IEC connector plug.

</tbody>
</table>

- The domestic socket must also provide a protective conductor. Make sure that the connection of the protective conductor of the domestic installations to the chamber’s protective conductor meets the latest technology. The protective conductors of the socket and plug must be compatible!
- Prior to connection and start-up, check the power supply voltage. Compare the values to the specified data located on the chamber’s type plate (left-hand side of the chamber, chap. 1.4).
• When connecting, please observe the regulations specified by the local electricity supply company and as well as the VDE directives (for Germany). We recommend the use of a residual current circuit breaker.

• Only use original connection cables from BINDER.

• *FD-S / FD-S-UL:* Do not place the power cable over the door gap when the chamber is hot after operation.

• Pollution degree (acc. to IEC 61010-1): 2

• Over-voltage category (acc. to IEC 61010-1): II

---

**CAUTION**

Danger of incorrect power supply voltage. Damage to the equipment.

- Check the power supply voltage before connection and start-up.
- Compare the power supply voltage with the data indicated on the type plate.

See also electrical data (chap. 16.4).

---

To completely separate the chamber from the power supply, you must disconnect the power plug. Install the chamber in a way that the power plug is easily accessible and can be easily pulled in case of danger.

---

5. **R-S controller overview**

![R-S controller](image)

*Figure 7: Normal display (sample values)*

<table>
<thead>
<tr>
<th>Displays of menus or value setting (example)</th>
</tr>
</thead>
</table>
| ![Display](image) | Upper display (red): Function depending on the menu.  
In Normal display: Actual temperature value. |
| ![Display](image) | Lower display (green): Function depending on the menu.  
In Normal display: Temperature set-point. |

<table>
<thead>
<tr>
<th>Buttons to navigate the manues and enter the values</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Button" /></td>
</tr>
</tbody>
</table>
| ![Button](image) | The *confirmation button* serves to select a menu point and to confirm the entered value. The confirmation must be made within 60 seconds.  
If in Normal display the *confirmation button* is pressed down for approx. 3 seconds, the display changes to standby mode (the lower display in Normal display shows “OFF”). To activate the display, press down the standby button again. |
### Status-LEDs for information about chamber conditions

</tr>
</tbody>
</table>

**Return to Normal display:**

If no entry is made for 120 seconds, the controller returns from each menu to normal display.

To directly return from each menu to normal display, keep pressed down the **confirmation button** and press the **arrow-up button**, if appropriate, several times. Each time you press the **arrow-up button** the controller goes back one level.

### 5.1 Menu structure overview

**Normal display**
- Temperature set-point entry directly via the **confirmation button** (chap. 7).

**Quick access**

Access from Normal display via the **arrow buttons**:
- Setting the safety controller value (chap. 9.2.1)
- Setting the timer run-time for timer function “Delayed Off” (chap. 10.2.1)

**“Setup” menu**

The menu is password protected (“S.Loc”). Enter password “10” and select the submenu.
- Setting the temperature unit (chap. 8.1)

**“Advanced configuration” menu**

The menu is password protected (“A.Loc”). Enter password “20” and select the submenu.
- Setting the ramp gradient (chap. 11.2)
6. **Start up**

Insert the plug into a suitable socket (chap. 4.2).

If there is no indication on the controller, press the **confirmation button** until the display lights up.

The controller now shows normal display (chap. 5). If a ramp gradient was active prior to turning off the chamber, the effective ramp set-point is displayed alternatingly with the target set-point (chap. 11)

---

Warming chambers may release odors in the first few days after commissioning. This is not a quality defect. To reduce odors quickly we recommend heating up the chamber to its nominal temperature for one day and in a well-ventilated location.

---

6.1 **Adjusting air change**

Opening the black exhaust air flap on top of the chamber serves to adjust the air change.

**BD-S / BD-S-UL, ED-S / ED-S-UL:** The open exhaust air flap allows increasing fresh air circulation through the exhaust air outlet.

**FD-S / FD-S-UL:** The open exhaust air flap and fan operation allow fresh air to come in through the ventilation gaps.

Note: If the exhaust air flap is completely open, the spatial temperature accuracy can be negatively influenced.

For connection to an exhaust/ventilation system see chap. 4.2.

---

7. **Temperature set-point entry**

Normal display shows the temperature set-point (lower display) and the actual temperature value (upper display).

**BD-S / BD-S-UL:** Setting with an accuracy of a tenth of a degree. Setting range: 0 °C / 31 °F up to 70 °C / 158 °F

**ED-S / ED-S-UL, FD-S / FD-S-UL:** Setting with an accuracy one degree. Setting range: 0 °C / 31 °F up to 250 °C / 482 °F

**Setting:**

In Normal display press the **confirmation button**.

The current temperature set-point (lower display) flashes.

Enter the desired temperature set-point with the **arrow buttons** and confirm with the **confirmation button**.

The controller will now equilibrate to the new temperature set-point.

---

Check and/or adjust the safety controller following any changes of the set-point (chap. 8).
8. Selecting the temperature unit

You can set the temperature unit to degrees Celsius °C or degrees Fahrenheit °F. If the unit is changed, all temperature values are converted accordingly. Also when specifying the ramp function (see chap. 11) this setting is accordingly taken as the basis.

<table>
<thead>
<tr>
<th>C = degrees Celsius</th>
<th>0 °C = 31°F</th>
<th>Conversion:</th>
</tr>
</thead>
<tbody>
<tr>
<td>F= degrees Fahrenheit</td>
<td>100 °C = 212°F</td>
<td>[Value in °F] = [Value in °C] * 1,8 + 32</td>
</tr>
</tbody>
</table>

8.1 Setting the temperature unit

Simultaneously press the **confirmation button** and the **arrow-up button** to access the „Setup“ menu. The password entry display “S.Loc” flashes. Enter the password “10” with the **arrow-up button** and confirm with the **confirmation button**.

Press the **arrow-up button** to access the “Unit” menu (temperature unit). The „Unit“ menu is shown with the current temperature unit.

Press the **confirmation button** to activate the entry. The display “Unit” flashes.

Select the desired unit with the **arrow buttons** and confirm with the **confirmation button**.

Keep pressed down the **confirmation button** and press the **arrow-up button** to return to Normal display.

9. Overtemperature protection

9.1 Overtemperature protective device (class 1)

The chambers are equipped with an internal temperature safety device, class 1 acc. to DIN 12880:2007. It serves to protect the unit and prevents dangerous conditions caused by major defects.

If the cut-off temperature is reached, the over temperature protective device permanently turns off the unit. The user cannot restart the device again. The protective cut-off device is located internally. Only a service specialist can replace it. Therefore, please contact an authorized service provider or BINDER service.

**Cut-off temperature values:**

- **BD-S / BD-S-UL:** 90 °C / 194 °F
- **ED-S / ED-S-UL, FD-S / FD-S-UL:** 318 °C / 604.4 °F
9.2 Safety controller

The chambers are regularly equipped with an adjustable electronic safety controller. It serves to protect the chamber, its environment and the contents against exceeding the maximum permissible temperature. Please observe the DGUV guidelines 213-850 on safe working in laboratories (formerly BGI/GUV-I 850-0, BGR/GUV-R 120 or ZH 1/119, issued by the employers’ liability insurance association) (for Germany).

Depending on the chamber type the safety controller acts as an over temperature safety device class 2 ("temperature limiter") or class 3.1 ("temperature protection") acc. to DIN 12880:2007.

Check the setting regularly and adjust it following any changes of the set-point.

- **BD-S / BD-S-UL**: Safety controller class 3.1
  
The safety controller class 3.1 limits the temperature inside the chamber to the entered safety controller set-point. In the event of a fault (if this maximum temperature is exceeded), it takes over the control to this value. This status is reported visually by an alarm message.
  
The safety controller keeps control of the chamber until the chamber temperature cools down below the safety controller set-point value.

- **ED-S / ED-S-UL, FD-S / FD-S-UL**: Safety controller class 2
  
The safety controller class 2 limits the temperature inside the chamber to the entered safety controller set-point. In the event of a fault (if this maximum temperature is exceeded) the safety controller completely turns off the heating until manual reset. This status is reported visually by an alarm message.

**Function check:**

Check the safety controller at appropriate intervals for its functionality. It is recommended that the authorized operating personnel should perform such a check, e.g., before starting a longer work procedure.

9.2.1 Setting the safety controller

A limit temperature is entered as the safety controller set-point, i.e. the absolute maximum permitted temperature value.

**BD-S / BD-S-UL**: Setting with an accuracy of a tenth of a degree. 0 °C / 31 °F up to 80 °C / 176 °F

**ED-S / ED-S-UL, FD-S / FD-S-UL**: Setting with an accuracy one degree. 0 °C / 31 °F up to 260 °C / 500 °F

Regularly check the safety controller setting relating to the entered temperature set-point.

Set the safety controller set-point by approx. 2 °C to 5 °C above the desired temperature set-point.

**Setting:**

In Normal display press the **arrow-up button** to access the “OCtl” (safety controller) setting menu.

The current safety controller value is shown (upper display)

Press the **confirmation button**. The display “OCtl” flashes.

Enter the desired safety controller value with the **arrow buttons** and confirm with **confirmation button**.

The new safety controller value is activated.

Press the **arrow-down button** to return to Normal display.
9.2.2 Alarm message and proceeding in case of an alarm

The status LED “Heating active” is lit.

- **BD-S / BD-S-UL: Safety controller class 3.1**
  
  The safety controller keeps control of the chamber until the chamber temperature cools down below the entered safety controller value. First the heating turns off. As soon as the inner chamber temperature has cooled down below the safety controller set-point, the heating is released and temperature control is resumed by the controller.

  If the safety controller class 3.1 has repeatedly taken over control, we recommend proceeding as follows:
  
  - Disconnect the chamber from the power supply.
  - Have an expert examine and rectify the cause of the fault.
  - Restart the chamber

- **ED-S / ED-S-UL, FD-S / FD-S-UL: Safety controller class 2**

  The heating turns off.

  As soon as the inner chamber temperature has cooled down below the safety controller value, you can reset the alarm message on the controller. Press the **confirmation button**. The heating is then released and temperature control is resumed by the controller. The status LED “Heating active” is off.

  If the safety controller class 2 has turned off the heating, we recommend proceeding as follows:
  
  - Disconnect the chamber from the power supply.
  - Have an expert examine and rectify the cause of the fault.
  - Restart the chamber
  - Reset the alarm message with the **confirmation button**

10. Timer function “Delayed Off”

The chambers offer the timer function “Delayed Off”.

This function serves to set a delay time until the control is turned off.

The selected timer run-time immediately starts running down.
When the timer expires, control deactivates (standby mode), heating and fan (with FD-S / FD-S-UL) turn off. The lower display in Normal display shows “OFF”.

10.1 Setting the timer run-time

In Normal display press the **arrow-down button** to access the “tOFF” entry menu.

The current timer run-time [hh.mm] is displayed (upper display)
Press the **confirmation button** to activate the entry. The display “tOFF” flashes.
Set the desired timer run-time with the **arrow buttons** and confirm with the **confirmation button**.

Press the **arrow-down button** to return to Normal display.
11. Ramp function

You can program temperature ramps in order to extend heating up times. This may be necessary in some cases to prevent temperature stress in the material during the heating up phase. Temperature ramps should only be used if required. Using them may result in considerably slowing down the heating up times. When the ramp function is turned off, the chamber will heat up with its maximum heating capacity.

The desired temperature rise is entered as a set-point gradient in degrees per hour. This gradient limits the maximum temperature increase to the entered value. Due to the heat and evaporation energy assumed by the drying material, smaller temperature gradients may also result.

You can select a gradient from “0.001” up to “9999” degrees per hour. The chamber will try to heat up according to the entered gradient. A heating-up rate of 24 °C per hour for the incubators BD-S / BD-S-UL and of 240 °C per hour for the heating and drying ovens ED-S / ED-S-UL and FD-S / FD-S-UL can be regarded as a realistic maximum.

The ramp proceeds from the actual value (equilibrated start set-point) towards the entered target set-point. During ramp operation the effective ramp set-point (SPr) continually rises in accordance to the entered gradient from the start set-point to the target set-point. The actual value follows this continually changing effective ramp set-point. As soon as the entered target set-point (ramp target temperature) is reached, this value is maintained constant.

![Figure 8: Set-point types during ramp operation](image)

11.1 Setting the ramp

1. Enter the start set-point of the ramp (chap. 7) and let the temperature equilibrate to this value.
2. Set the desired gradient in the „rAtE“ menu
   - Setting „0.001“ up to „9999“: Maximum temperature rise in °C per hour or °F per hour.
   - Setting „Off“: deactivated ramp function. The chamber will heat up with its maximum heating capacity.
3. Then enter a new set-point as the ramp’s target set-point (chap. 7).

As soon as the entries have been adopted, the ramp function is activated. The chamber heats up with the entered gradient, as long as the entered set-point (SP) exceeds the actual temperature value.
11.2 Setting the gradient

Simultaneously press the confirmation button and the arrow-down button to access the “Advanced configuration” menu. The password entry display “A.Loc” flashes.

Enter the password “20” with the arrow-up button and confirm with the confirmation button.

Press the arrow-up button to access the “SPti” menu. Press the confirmation button to select the menu.

Press the arrow-up button to access the “rAtE” (ramp gradient) submenu. The “rAtE” submenu is shown with the current setting.

Press the confirmation button to activate the entry. The display “rAtE” flashes.

Set the desired gradient with the arrow buttons and confirm with the confirmation button.

Keep pressed down the confirmation button and press the arrow-up button several times to return to Normal display.

11.3 Display of the ramp course

In normal display the target set-point and the effective ramp set-point are shown alternatingly in the lower display.

11.4 Turning off the ramp function

To turn off the ramp function, the gradient must be set to “Off” in the “rAtE” menu (chap. 11.2).
12. Options

12.1 Data logger kits (option)

BINDER Data Logger Kits offer an independent long-term measuring system for temperature. They are equipped with a keyboard and a large LCD display, alarm functions and a real-time function. Measurement data are recorded in the Data Logger and can be read out after the measurement via the RS232 interface of the Data Logger. It offers a programmable measuring interval and permits storing up to 64000 measuring values. Reading out is done with the Data Logger evaluation software. You can give out a combined alarm and status protocol directly to a serial printer.

**BD-S / BD-S-UL:** Data Logger Kit T 220. Temperature range -90 °C / -130 °F up to +220 °C / 428 °F

**ED-S / ED-S-UL, FD-S / FD-S-UL:** Data Logger Kit T 350. Temperature range 0 °C / 32 °F up to +350 °C / 662 °F

For detailed information on installation and operation of the BINDER Data Logger, please refer to the mounting instructions Art. No. 7001-0204 and to the original user manual of the manufacturer, supplied with the data logger.

13. Maintenance, cleaning, and service

13.1 Maintenance intervals, service

**DANGER**

Electrical hazard. Danger of death.

∅ The chamber must NOT become wet during operation or maintenance work.

∅ Do NOT remove the rear panel of the chamber.

➢ Disconnect the chamber before conducting maintenance work. Disconnect the power plug.

➢ Ensure all maintenance work is conducted by licensed electricians or experts authorized by BINDER.

Ensure regular maintenance work is performed at least once a year.

The warranty becomes void if maintenance work is conducted by non-authorized personnel.

Replace the door gasket only when cold. Otherwise, the door gasket may become damaged.

We recommend taking out a maintenance agreement. Please consult BINDER Service.

BINDER telephone hotline: +49 (0) 7462 2005 555
BINDER fax hotline: +49 (0) 7462 2005 93555
BINDER e-mail hotline: service@binder-world.com

BINDER address: BINDER GmbH, post office box 102, D-78502 Tuttlingen

International customers, please contact your local BINDER distributor.
13.2 Cleaning and decontamination

Clean the chamber after each use to avoid potential corrosion damage by ingredients of the test material.

DANGER

Electrical hazard.
Danger of death.

- Do NOT spill water or cleaning agents over the inner and outer surfaces.
- Disconnect the chamber before cleaning. Disconnect the power plug.
- Completely dry the chamber before turning it on again.

13.2.1 Cleaning

Disconnect the chamber from the power supply before cleaning. Disconnect the power plug.

The interior of the chamber must be kept clean. Thoroughly remove any residues of the charging material.

Wipe the surfaces with a moistened towel. In addition, you can use the following cleaning agents:

- Exterior surfaces
- Inner chamber
- Racks
- Door gaskets
  - Standard commercial cleaning detergents free from acid or halides.
  - Alcohol-based solutions.
  - We recommend using the neutral cleaning agent Art. No. 1002-0016.

- Instrument panel
  - Standard commercial cleaning detergents free from acid or halides.
  - We recommend using the neutral cleaning agent Art. No. 1002-0016.

- Zinc coated hinge parts
- Rear chamber wall
  - Standard commercial cleaning detergents free from acid or halides.
  - Do NOT use a neutral cleaning agent on zinc coated surfaces.

Do not use cleaning agents that may cause a hazard due to reaction with components of the device or the charging material. If there is doubt regarding the suitability of cleaning products, please contact BINDER service.

We recommend using the neutral cleaning agent Art. No. 1002-0016 for a thorough cleaning.

Any corrosive damage that may arise following use of other cleaning agents is excluded from liability by BINDER GmbH.

Any corrosive damage caused by a lack of cleaning, is excluded from liability by BINDER GmbH.

CAUTION

Danger of corrosion.
Damage to the chamber.

- Do NOT use acidic or chlorine cleaning detergents.
- Do NOT use a neutral cleaning agent on other kind of surfaces e.g., the zinc coated hinge parts or the rear chamber wall.

For surface protection, perform cleaning as quickly as possible.
After cleaning completely remove cleaning agents from the surfaces with a moistened towel. Let the chamber dry.
Soapsuds may contain chlorides and must therefore NOT be used for cleaning.

With every decontamination method, always use adequate personal safety controls.

Following cleaning, leave the chamber door open or remove the access port plugs.

The neutral cleaning agent may cause health problems in contact with skin and if ingested. Follow the operating instructions and safety hints labeled on the bottle of the neutral cleaning agent.

Recommended precautions: To protect the eyes use sealed protective goggles. Suitable protective gloves with full contact: butyl or nitrile rubber, penetration time >480 minutes.

### CAUTION

**Contact with skin, ingestion.**

**Skin and eye damage due to chemical burns.**

- Do not ingest. Keep away from food and beverages.
- Do NOT empty into drains.
- Wear protective gloves and goggles.
- Avoid skin contact.

### 13.2.2 Decontamination

The operator must ensure that proper decontamination is performed in case a contamination of the chamber by hazardous substances has occurred.

Disconnect the chamber from the power supply prior to decontamination. Pull the power plug.

Do not use decontamination agents that may cause a hazard due to reaction with components of the device or the charging material. If there is doubt regarding the suitability of cleaning products, please contact BINDER service.

You can use the following disinfectants:

<table>
<thead>
<tr>
<th>Inner chamber</th>
<th>Standard commercial surface disinfectants free from acid or halides. Alcohol-based solutions. We recommend using the disinfectant spray Art. No. 1002-0022.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>For chemical disinfection, we recommend using the disinfectant spray Art. No. 1002-0022. Any corrosive damage that may arise following use of other disinfectants is excluded from liability by BINDER GmbH.</td>
</tr>
<tr>
<td></td>
<td>With every decontamination method, always use adequate personal safety controls.</td>
</tr>
</tbody>
</table>

In case of impurity of the interior with biological or chemical hazardous material, there are three possible procedures depending on the type of contamination and of the charging material.

1. The drying and heating ovens ED-S / ED-S-UL and FD-S / FD-S-UL can be hot air sterilized at 190 °C / 374 °F for at least 30 minutes. All inflammable goods must be removed from the interior before.
2. Spray the inner chamber with an appropriate disinfectant.
   Before start-up, the chamber must be absolute dry and ventilated, because explosive gases may form during the decontamination process.

3. You can remove the racks and the rack supports from the chamber and sterilize them

   In case of eye contact, the disinfectant spray may cause eye damage due to chemical burns. Follow the operating instructions and safety hints labeled on the bottle of the disinfectant spray.

   **Recommended precautions:** To protect the eyes use sealed protective goggles.

   - Eye contact.
   - Eye damage due to chemical burns.
   - Do NOT empty into drains.
   - Wear protective goggles.

After using the disinfectant spray, allow the chamber to dry thoroughly, and aerate it sufficiently.

### 13.3 Sending the chamber back to BINDER GmbH

If you return a BINDER product to us for repair or any other reason, we will only accept the product upon presentation of an **authorization number** (RMA number) that has previously been issued to you. An authorization number will be issued after receiving your complaint either in writing or by telephone **prior** to your sending the BINDER product back to us. The authorization number will be issued following receipt of the information below:

- BINDER product type and serial number
- Date of purchase
- Name and address of the dealer from which you bought the BINDER product
- Exact description of the defect or fault
- Complete address, contact person and availability of that person
- Exact location of the BINDER product in your facility
- A contamination clearance certificate (chap. 19) must be faxed in advance

The authorization number must be applied to the packaging in such a way that it can be easily recognized or be recorded clearly in the delivery documents.

For safety reasons we cannot accept a chamber delivery if it does not carry an authorization number.

**Return address:**

BINDER GmbH, Abteilung Service
Gänsäcker 16, 78502 Tuttlingen, Germany
14. Disposal

14.1 Disposal of the transport packing

</tbody>
</table>

If recycling is not possible, all packing parts can also be disposed of with normal waste.

14.2 Decommissioning

- Disconnect the chamber from the power supply (pull the power plug).
- Temporal decommissioning: See indications for appropriate storage, chap. 3.3.
- Final decommissioning: Dispose of the chamber as described in chap. 14.3 to 14.5.

14.3 Disposal of the chamber in the Federal Republic of Germany

According to Annex I of Directive 2012/19/EU of the European Parliament and of the Council on waste electrical and electronic equipment (WEEE), BINDER devices are classified as "monitoring and control instruments" (category 9) only intended for professional use”. They must not be disposed of at public collecting points.

The chambers bear the symbol for the marking of electrical and electronic equipment manufactured / placed on the market in the EC after 13 August 2005 and be disposed of in separate collection according to Directive 2012/19/EU on waste electrical and electronic equipment (WEEE) and German national law for electrical and electronic equipment (Elektro- und Elektronikgerätegesetz, ElektroG). WEEE marking: crossed-out wheeled bin with solid bar under. A significant part of the materials must be recycled in order to protect the environment.

At the end of the device’s service life, have the device disposed of according to the German national law for electrical and electronic equipment (Elektro- und Elektronikgerätegesetz, ElektroG from 20 October 2015, BGBl. I p. 1739) or contact BINDER service who will organize taking back and disposal of the chamber according to the German national law for electrical and electronic equipment (Elektro- und Elektronikgerätegesetz, ElektroG from 20 October 2015, BGBl. I p. 1739).
CAUTION

Violation against existing law.

☐ Do NOT dispose of BINDER devices at public collecting points.

➢ Have the device disposed of professionally at a recycling company which is certified according to the German national law for electrical and electronic equipment (Elektro- und Elektronikgerätegesetz, ElektroG from 20 October 2015, BGBl. I p. 1739).

or

➢ Instruct BINDER Service to dispose of the device. The general terms of payment and delivery of BINDER GmbH apply, which were valid at the time of purchasing the chamber.

Certified companies disassemble waste BINDER equipment in primary substances for recycling according to Directive 2012/19/EU. In order to eliminate any health hazards to the employees of the recycling companies, the devices must be free from toxic, infectious or radioactive substances.

Prior to handing the chamber over to a recycling company, it is the user’s responsibility that it is free from toxic, infectious or radioactive substances.

• Prior to disposal, clean all introduced or residual toxic substances from the chamber.
• Prior to disposal, disinfect the chamber from all sources of infection. Be aware of the fact that sources of infection may also be located outside the inner chamber.
• If you cannot safely remove all toxic substances and sources of infection from the chamber, dispose of it as “special” waste according to national law.
• Fill out the contamination clearance certificate (chap. 19) and enclose it with the chamber.

WARNING

Contamination of the device with toxic, infectious or radioactive substances.

Danger of intoxication.

 Madness

Danger of infection.

☐ NEVER take a chamber contaminated with toxic substances or sources of infection for recycling according to Directive 2012/19/EU.

➢ Prior to disposal, remove all toxic substances and sources of infection from the chamber.

➢ Dispose of a chamber from which all toxic substances or sources of infection cannot be safely removed as special waste according to national law.

14.4 Disposal of the chamber in the member states of the EU except for the Federal Republic of Germany

According to Annex I of Directive 2012/19/EU of the European Parliament and of the Council on waste electrical and electronic equipment (WEEE), BINDER devices are classified as “monitoring and control instruments” (category 9) only intended for professional use. They must not be disposed of at public collecting points.

The chambers bear the symbol for the marking of electrical and electronic equipment manufactured / placed on the market in the EC after 13 August 2005 and be disposed of in separate collection according to the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE); WEEE marking: crossed-out wheeled bin with solid bar under.

At the end of the device’s service life, notify the distributor who sold you the device, who will take back and dispose of the chamber according to the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE).
CAUTION

Violation against existing law.

☐ Do NOT dispose of BINDER devices at public collecting points.

➢ Have the device disposed of professionally at a recycling company which is certified according to conversion of the Directive 2012/19/EU into national law.

or

➢ Instruct the distributor who sold you the device to dispose of it. The agreements apply that were reached with the distributor when purchasing the chamber (e.g. his general terms of payment and delivery).

➢ If your distributor is not able to take back and dispose of the chamber, please contact BINDER service.

Certified companies disassemble waste BINDER equipment in primary substances for recycling according to Directive 2012/19/EU. In order to exclude any health hazard for the employees of the recycling companies, the devices must be free from toxic, infectious or radioactive substances.

Prior to handing the chamber over to a recycling company, it is the user’s responsibility that it is free from toxic, infectious or radioactive substances.

• Prior to disposal, clean all introduced or residual toxic substances from the chamber.

• Prior to disposal, disinfect the chamber from all sources of infection. Be aware of the fact that sources of infection may also be located outside the inner chamber.

• If you cannot safely remove all sources of infection and toxic substances from the chamber, dispose of it as "special" waste according to national law.

• Fill out the contamination clearance certificate (chap. 19) and enclose it with the chamber.

WARNING

Contamination of the device with toxic, infectious or radioactive substances.

Danger of intoxication.

Danger of infection.

☐ NEVER take a chamber contaminated with toxic substances or sources of infection for recycling according to Directive 2012/19/EU.

➢ Prior to disposal, remove all toxic substances and sources of infection from the chamber.

➢ Dispose of a chamber from which all toxic substances or sources of infection cannot be safely removed as "special" waste according to national law.

14.5 Disposal of the chamber in non-member states of the EU

CAUTION

Alteration of the environment.

➢ For final decommissioning and disposal of the chamber, please contact BINDER Service.

➢ Follow the statutory regulations for appropriate, environmentally friendly disposal.

Only qualified service personnel authorized by BINDER must perform repair. Repaired chambers must comply with the BINDER quality standards.
16. Technical description

16.1 Factory calibration and adjustment

This chamber was calibrated and adjusted in the factory. Calibration and adjustment were performed using standardized test instructions, according to the QM DIN EN ISO 9001 system applied by BINDER (certified since December 1996 by TÜV CERT). All test equipment used is subject to the administration of measurement and test equipment that is also constituent part of the BINDER QM DIN EN ISO 9001 systems. They are controlled and calibrated to a DKD-Standard at regular intervals.

16.2 Definition of usable volume

The usable volume illustrated below is calculated as follows:

\[ V_{USE} = (A - 2a) \times (B - 2b) \times (C - 2c) \]

Figure 9: Determination of the useable volume

The technical data refers to the defined usable volume.

Do NOT place samples outside this usable volume.
Do NOT load this volume by more than half to enable sufficient airflow inside the chamber.
Do NOT divide the usable volume into separate parts with large area samples.
Do NOT place samples too close to each other in order to permit circulation between them and thus obtain a homogenous distribution of temperature.

16.3 Over current protection

The chambers are protected by one (UL chambers) or two miniature fuses against over current, accessible from the outside. The miniature fuses are located at the rear of the chamber above the power cable connection. Each fuse holder is equipped with a fuse clip 5mm x 20 mm (cUL-Version 6,3x32 mm). A fuse may be replaced only with a substitute of the same ratings. Refer to the technical data of the respective device type.

| Energy consumption at 37 °C / 98.6 °F | Wh/h | 25 | -- | -- | 30 | -- | -- |
| Energy consumption at 150 °C / 302 °F | Wh/h | -- | 210 | 290 | -- | 300 | 340 |
All technical data is specified for unloaded chambers with standard equipment at an ambient temperature of +22 °C +/- 3°C / 71.6 °F +/- 5.4 °F and a power supply voltage fluctuation of +/-10%. Technical data is determined in accordance to BINDER Factory Standard Part 2:2015 and DIN 12880:2007.

All indications are average values, typical for chambers produced in series. We reserve the right to change technical specifications at any time.

If the chamber is fully loaded, the specified heating up times may vary according to the load.

16.5 Equipment and options (extract)

To operate the chamber, use only original BINDER accessories or accessories / components from third-party suppliers authorized by BINDER. The user is responsible for any risk arising from using unauthorized accessories.

**Standard equipment**
- R-S microprocessor temperature controller
- Timer function “Delayed Off”
- Adjustable ramp function
- BD-S / BD-S-UL: Temperature safety controller class 3.1 acc. to DIN 12880:2007 with visual alarm
- BD-S / BD-S-UL: Inner glass door
- Exhaust air outlet, internal diameter 50 mm / 1.97 inches, with exhaust air flap
- Adjustable air change via exhaust air outlet
- 2 racks, chrome-plated, each rack with 4 rack supports

**Options / accessories**
- Rack, chrome-plated
- Data Logger Kit T 220
- Data Logger Kit T 350
- Neutral cleaning agent (liquid concentrate)
- Stable table on wheels with castors and locking brakes

16.6 Accessories and spare parts (extract)

BINDER GmbH is responsible for the safety features of the chamber only, provided skilled electricians or qualified personnel authorized by BINDER perform all maintenance and repair, and if components relating to chamber safety are replaced in the event of failure with original spare parts. The user is responsible for any risks arising from using unauthorized accessories/components.

Genehmigung zum Benutzen des auf Seite 1 abgebildeten markenrechtlich geschützten Zeichens des VDE:

Die Genehmigung ist so lang gültig wie die VDE-Bestimmungen gelten, die der Zertifizierung zugrunde gelegen haben, sofern sie nicht auf Grund anderer Bedingungen aus der VDE Prüf- und Zertifizierungsordnung (PM102) zurückgezogen werden muss.
Produkte, die das Biozid Dimethylfumarat (DMF) enthalten, dürfen gemäß der Kommissionsentscheidung 2009/251/EG nicht mehr in den Verkehr gebracht oder auf dem Markt bereitgestellt werden. Der VDE-Zeichengenehmigungsausweis wird ausschließlich auf der ersten Seite unterzeichnet.

Approval to use the legally protected Mark of the VDE as shown on the first page:

Basis for the use are the general terms and conditions of the VDE Testing and Certification Institute (www.vde.com/terms-institute). The right to use the mark is granted only to the mentioned company with the named places of manufacture and the listed products with the related type references. The place of manufacture shall be equipped in a way that a constant manufacturing of the certified construction is assured.
The approval is valid as long as the VDE specifications are in force, on which the certification is based on, unless it is withdrawn according to the VDE Testing and Certification Procedure (PM102).
The validity period of a VDE-GS-Mark Approval may be prolonged on request. In case of changes in legal and / or normative requirements, the validity period of a VDE-GS-Mark Approval may be shortened.
Products containing the biocide dimethylfumarate (DMF) may not be marketed or made available on the EC market according to the Commission Decision 2009/251/EC.
The approval is solely signed on the first page.
17.5 Certificate of UL Compliance from Underwriters Laboratories Inc.

Valid for UL chambers only

CERTIFICATE OF COMPLIANCE

Certificate Number: 20190319-E200795
Report Reference: E200795-20190314
Issue Date: 2019-MARCH-19

Issued to: BINDER GMBH
IM MITTLEREN OESCH 5
78532 TUTTLINGEN GERMANY

This certificate confirms that representative samples of LABORATORY-USE ELECTRICAL EQUIPMENT Laboratory Ovens: BD-S 056-UL; ED-S 056-UL; BD-S 115-UL; ED-S 115-UL; FD-S 115-UL

Have been investigated by UL in accordance with the Standard(s) indicated on this Certificate.

Standard(s) for Safety: UL 61010-2-010 and CAN/CSA-C22.2 NO. 61010-2-010 Particular Requirements for Laboratory Equipment for the Heating of Materials.

Additional Information: See the UL Online Certifications Directory at https://iq.ulprospector.com for additional information.

This Certificate of Compliance does not provide authorization to apply the UL Mark. Only the UL Follow-Up Services Procedure provides authorization to apply the UL Mark.

Only those products bearing the UL Mark should be considered as being UL Certified and covered under UL’s Follow-Up Services.

Look for the UL Certification Mark on the product.
18. Product registration

Online Product Registration
Register your BINDER now!

www.binder-world.com/register

The registration is free and takes just a few seconds.
Advantages:
▶ Short response times if service is needed
▶ Fair prices when relocating or installing equipment
▶ Calibration as required at no charge in case of recalls
▶ Free information on news, product upgrades and accessories

Easy registered in 3 steps:

1. List serial number here: □□□□□□□□□

2. Go online: www.binder-world.com/register

3. Register serial number
19. Contamination clearance certificate

19.1 For chambers located outside the USA and Canada

Declaration with regard to safety and health

Erklärung zur Sicherheit und gesundheitlichen Unbedenklichkeit

The German Ordinance on Hazardous Substances (GefStofV), and the regulations regarding safety at the workplace, require that this form be filled out for all products that are returned to us, so that the safety and health of our employees can be warranted.

Die Sicherheit und Gesundheit unserer Mitarbeiter, die Gefahrstoffverordnung GefStofV und die Vorschriften zur Sicherheit am Arbeitsplatz machen es erforderlich, dass dieses Formblatt für alle Produkte, die an uns zurückgeschickt wird.

In the absence of a completely filled out form, a repair is not possible.

Ohne Vorliegen des vollständig ausgefüllten Formblattes ist eine Reparatur nicht möglich.

- A completely filled out form should be transmitted by Fax (+49 (0) 7462 2005 93555) or by letter in advance to us, so that this information is available before the equipment/component part arrives. A second copy of this form should accompany the equipment/component part. Eventually the carrier should be informed.

Eine vollständig ausgefüllte Kopie dieses Formblattes soll per Telefax (Nr. +49 (0) 7462 2005 93555) oder Brief vorab an uns gesandt werden, so dass die Information vorliegt, bevor das Gerät/Bauteil eintrifft. Eine weitere Kopie soll dem Gerät/Bauteil beigefügt sein. Ggf. ist auch die Spedition zu informieren.

- Incomplete information or non-conformity with this procedure will inevitably lead to substantial delays in processing. We hope you will have understanding for this measure, which lies outside of our area of influence, and that you will help us to speed up this procedure.

- Please fill out this form completely.

Bitte unbedingt vollständig ausfüllen!

Equipment that is returned to the factory for repair must be accompanied by a completely filled out contamination clearance certificate. For service and maintenance works on site, such a contamination clearance certificate must be submitted to the service technician before the start of the works. No repair or maintenance of the equipment is possible, without a properly filled out contamination clearance certificate.

### 19.2 For chambers located in the USA and Canada

#### Product Return Authorization Request

Please complete this form and the Customer Decontamination Declaration (next 2 pages) and attach the required pictures. E-mail to: IDL_SalesOrderProcessing_USA@binder-world.com

After we have received and reviewed the complete information we will decide on the issue of a RMA number. Please be aware that size specifications, voltage specifications as well as performance specifications are available on the internet at www.binder-world.us at any time.

Take notice of shipping laws and regulations.
